## INTRODUCTION

MEN, and especially those who live in great cities, often feel a strong attraction towards what is called "the simple life"; and from time to time certain men and women, bolder and more in earnest than their fellows, make a resolute effort to break away from the ordinary round which comes with a high state of civilization, and to live a life freer and more natural than these later days easily allow. *Walden* is the story of a man who did this. For more than two years he lived alone in a house that he built for himself on the edge of Walden Pond, near the village of Concord, Massachusetts. He ate no fresh meat or butter, and drunk neither milk, tea, nor coffee. His food was chiefly unfermented bread made from Indian meal, and the vegetables that he grew in a patch of ground near his house. His comrades were the birds, beasts and insects of the forest, whom he taught to be happy and fearless in his company, as he was happy and fearless in theirs. He grew to know the face of the forest so well that he needed no almanac: he could tell for himself the time of the year within two days. When he wanted money he worked for a few days or a few weeks for one of the farmers round about until his immediate wants were supplied; the leisure that remained to him he spent in study and meditation.

What manner of man he was, and why he did these things, *Walden* will tell us.

The New England township of Concord, quietly situated amidst woods and meadows and gently flowing streams, made itself for ever famous in 1775 by striking the first blow in the war of American Independence. About sixty years later it

gained another kind of fame through a small company of thinkers and reformers who were connected with it. These men and women were deeply interested in the question of what were the things best worth having in life ; and they attempted to find a cure for the social evils that disgraced their times. They did not agree on all points, but all of them advocated a simpler and more natural way of life, and an independence of wealth and luxury ; and they all agreed that man must look for his truest happiness in himself, and find his deepest delight in his spiritual and intellectual experiences. Emerson, whom we in this country know chiefly by his essays, was one of this group, and Amos Alcott, father of Louisa Alcott who wrote *Little Women*, was another. Among them they made various experiments to prove and advance their doctrine. The most important of these was what is known as the Brook Farm Experiment. A small band of ardent disciples settled on the farm, where they planned to lead the ideal "simple life," sharing the work between them, and living on the produce. Every member of the brotherhood was to learn to live hardly and renounce all indulgences, so that, little money being required, the hours of labour might be few, and ample time remain for the brotherly communion of spirit and intellect that they felt to be the highest good. It was Wordsworth's "plain living and high thinking" applied to a community. The experiment failed, because the farm, worked by men with little experience or capital, could not be made productive enough to support the colony ; but it left its mark.

In an atmosphere full of such ideas as these Henry David Thoreau grew from youth to manhood. He was born in 1817, the third child in a family of four. His father was of French descent, a quiet, cheerful man, diligent in his business, which was the making of lead pencils ; his mother was the daughter of a Scottish minister. They were not rich, but their home, under the rule of the thrifty, managing mother, was a comfortable one, and the children were happy and

well-cared for. Henry, from the time that he could walk, roamed the woods and meadows barefoot, beginning that close friendship with the wild creatures round his home which grew ever warmer and more intimate as the years went on. When he was sixteen years old the family, by the practice of severe economy in the home, and with the help of contributions from the elder brother and sister, who were by that time working as school teachers, managed to send him to Harvard University. He stayed there for four years, took his degree, and then came back to Concord to help his elder brother John keep the village school. But the sturdy, primitive farmers round about did not approve of his methods of education. He would not flog his pupils ; and they could not believe that lads such as theirs could be properly managed without some good hard blows being dealt out to them. The story is told that after this had been repeatedly and urgently represented to Thoreau, he one morning chose out a boy—we are not told on what principle the selection was made—flogged him with great thoroughness, and in the afternoon sent in his resignation.

He next took up his father's trade and became a maker of lead pencils. Doing this as he did everything, earnestly and diligently, he found out by repeated experiments how to make a better pencil than any at that time on the market. All his friends assumed that his fortune was made, and were hearty in their congratulations ; but he astonished them by saying quietly that he would never make another pencil. "Why should I ? I would not do again what I have done once." His interest in the whole matter was gone, and he could see no sense in spending precious time in drudgery, even though it brought him great riches. He began to lead the life which gradually forming convictions assured him was the truest and highest within his reach. He cultivated skill in many directions, became an expert land surveyor, and trained himself to be able to perform heavy manual labour. But chiefly he learnt to live simply and have few wants, so that

he was able by working for about six weeks in the year to earn all the money he needed, and could give the rest of the time to the pursuits that he loved.

When Thoreau was about twenty-one years old he became intimate with Emerson, and henceforward this great man who was looked upon almost with reverence by the best and most intellectual section of New England society became his leader and prophet. From 1841 to 1843 he lived in Emerson's home on the footing, it would seem, of a pupil and disciple who paid for his board and his education by helping in the household as a devoted son might have done. He was so thorough, so practical and so dependable that he made himself valued and loved by the whole family. It was at this time that the Brook Farm Experiment was going on, and Thoreau doubtless heard it discussed in all its details with eager interest and approval. So that when he returned home to Concord the seed which was to bring forth his own attempt to live the simple life was already sown.

In 1845 he went to live at Walden ; and in 1847 he returned to his father's house to take up his old way of life. He wrote several books, the chief being *A Week on the Concord and Merrimac Rivers*, *Walden*, and *The Journal*. He contributed articles to various magazines, lectured, and sometimes did a turn of manual labour or land-surveying on one of the Concord farms. He worked no longer than was necessary to supply his very simple wants, and his leisure he spent in studying wild nature round about his native Concord. Only once was the course of his quiet, happy life broken in upon by public affairs, and that was when he upheld the cause of John Brown in strong opposition to the popular feeling of the town. In 1860 he caught a chill in a snowstorm that came on while he was counting the growth rings in some stumps of old trees. Consumption set in, and he died in 1862.

## I. MY HOUSE.

NEAR the end of March 1845 I borrowed an axe and went down to the woods by Walden Pond, nearest to where I intended to build my house, and began to cut down some tall arrowy white pines, still in their youth, for timber. It is difficult to begin without borrowing, but perhaps it is the most generous course thus to permit your fellow-men to have an interest in your enterprise. The owner of the axe, as he released his hold on it, said that it was the apple of his eye ; but I returned it sharper than I received it. It was a pleasant hillside where 10 I worked, covered with pine woods, through which I looked out on the pond, and a small open field in the woods where pines and hickories were springing up. The ice in the pond was not yet dissolved, though there were some open spaces, and it was all dark-coloured and saturated with water. There were some slight flurries of snow during the day that I worked there ; but for the most part when I came out on to the railroad, on my way home, its yellow sand heap stretched away gleaming in the hazy atmosphere, and the rails shone in the spring 20 sun, and I heard the lark and peewee and other birds already come to commence another year with us. They were pleasant spring days, in which the winter of man's discontent was thawing as well as the earth, and the life

that had lain torpid began to stretch itself. One day, when my axe had come off and I had cut a green hickory for a wedge, driving it with a stone, and had placed the whole to soak in a pond hole in order to swell the wood, I saw a striped snake run into the water, and he lay on the bottom, apparently without inconvenience, as long as I staid there, or more than a quarter-of-an-hour; perhaps because he had not yet fairly come out of the torpid state. It appeared to me that for a like reason  
10 men remain in their present low and primitive condition; but if they should feel the influence of the spring of springs arousing them, they would of necessity rise to a higher and more ethereal life. I had previously seen the snakes in frosty mornings in my path with portions of their bodies still numb and inflexible, waiting for the sun to thaw them. On the 1st of April it rained and melted the ice, and in the early part of the day, which was very foggy, I heard a stray goose groping about over the pond and cackling as if lost, or like the  
20 spirit of the fog.

So I went on for some days cutting and hewing timber, and also studs and rafters, all with my narrow axe, not having many communicable or scholar-like thoughts, singing to myself,—

“Men say they know many things;  
But lo! they have taken wings,—  
The arts and sciences,  
And a thousand appliances;  
The wind that blows  
Is all that anybody knows.”

I hewed the main timbers six inches square, most of the studs on two sides only, and the rafters and floor timbers on one side, leaving the rest of the bark on, so that they

were just as straight and much stronger than sawed ones. Each stick was carefully mortised or tenoned by its stump, for I had borrowed other tools by this time. My days in the woods were not very long ones ; yet I usually carried my dinner of bread and butter, and read the newspaper in which it was wrapped, at noon, sitting amid the green pine boughs which I had cut off, and to my bread was imparted some of their fragrance, for my hands were covered with a thick coat of pitch. Before I had done I was more the friend than the foe of the 10 pine tree, though I had cut down some of them, having become better acquainted with it. Sometimes a rambler in the wood was attracted by the sound of my axe, and we chatted pleasantly over the chips which I made.

By the middle of April, for I made no haste in my work, but rather made the most of it, my house was framed and ready for the raising. I had already bought the shanty of James Collins, an Irishman who worked on the Fitchburg Railroad, for boards. James Collins' shanty was considered an uncommonly fine one. When 20 I called to see it he was not at home. I walked about the outside, at first unobserved from within, the window was so deep and high. It was of small dimensions, with a peaked cottage roof, and not much else to be seen, the dirt being raised five feet all round as if it were a compost heap. The roof was the soundest part, though a good deal warped and made brittle by the sun. Door-sill there was none, but a perennial passage for the hens under the door board. Mrs. C. came to the door and asked me to view it from the inside. The hens were 30 driven in by my approach. It was dark, and had a dirt floor for the most part, dank, clammy, and aguish, only

here a board and there a board which would not bear removal. She lighted a lamp to show me the inside of the roof and the walls, and also that the board floor extended under the bed, warning me not to step into the cellar, a sort of dust-hole two feet deep. In her own words, they were "good boards overhead, good boards all around, and a good window,"—of two whole squares originally, only the cat had passed out that way lately. There was a stove, a bed, and a place to sit, an infant in the house  
10 where it was born, a silk parasol, gilt-framed looking-glass, and a patent new coffee-mill nailed to an oak sapling, all told. The bargain was soon concluded, for James had in the meanwhile returned. I to pay four dollars and twenty-five cents to-night, he to vacate at five to-morrow morning, selling to nobody else meanwhile : I to take possession at six. It were well, he said, to be there early, and anticipate certain indistinct but wholly unjust claims on the score of ground-rent and fuel. This he assured me was the only encumbrance. At  
20 six I passed him and his family on the road. One large bundle held their all,—bed, coffee-mill, looking-glass, hens,—all but the cat ; she took to the woods and became a wild cat, and, as I learned afterwards, trod in a trap set for woodchucks, and so became a dead cat at last.

I took down this dwelling the same morning, drawing the nails, and removed it to the pond-side by small cart-loads, spreading the boards on the grass there to bleach and warp back again in the sun. One early thrush gave  
30 me a note or two as I drove along the woodland path. I was informed treacherously by a young Patrick that neighbour Seeley, an Irishman. in the intervals of the

carting, transferred the still tolerable, straight, and drivable nails, staples, and spikes to his pocket, and then stood when I came back to pass the time of day, and look freshly up, unconcerned, with spring thoughts, at the devastation ; there being a dearth of work, as he said. He was there to represent spectatordom, and help make this seemingly insignificant event one with the removal of the gods of Troy.

I dug my cellar in the side of a hill sloping to the south, where a woodchuck had formerly dug his burrow, 10 down through sumach and blackberry roots, and the lowest stain of vegetation, six feet square by seven deep, to a fine sand where potatoes would not freeze in any winter. The sides were left shelving, and not stoned ; but the sun having never shone on them, the sand still keeps its place. It was but two hours' work. I took particular pleasure in this breaking of ground, for in almost all latitudes men dig into the earth for an equable temperature. Under the most splendid house 20 in the city is still to be found the cellar where they store their roots as of old, and long after the superstructure has disappeared posterity remark its dent in the earth. The house is still but a sort of porch at the entrance of a burrow.

At length, at the beginning of May, with the help of some of my acquaintances, rather to improve so good an occasion for neighbourliness than from any necessity, I set up the frame of my house. No man was ever more honoured in the character of his raisers than I. They are destined, I trust, to assist at the raising 30 of loftier structures one day. I began to occupy my house on the 4th of July, as soon as it was boarded and

roofed, for the boards were carefully feather-edged and lapped, so that it was perfectly impervious to rain, but before boarding I laid the foundation of a chimney at one end, bringing two cartloads of stones up the hill from the pond in my arms. I built the chimney after my hoeing in the fall, before a fire became necessary for warmth, doing my cooking in the meanwhile out of doors on the ground, early in the morning ; which mode I still think is in some respects more convenient and agreeable  
10 than the usual one. When it stormed before my bread was baked, I fixed a few boards over the fire, and sat under them to watch my loaf, and passed some pleasant hours in that way. In those days, when my hands were much employed, I read but little, but the least scraps of paper which lay on the ground, my holder, or tablecloth, afforded me as much entertainment ; in fact, answered the same purpose as the *Iliad*.

Before winter I built a chimney, and shingled the sides of my house, which were already impervious to  
20 rain, with imperfect and sappy shingles made of the first slice of the log, whose edges I was obliged to straighten with a plane.

I have thus a tight shingled and plastered house, ten feet wide by fifteen long, eight-feet posts, with a garret and a closet, a large window on each side, two trap-doors, one door at the end, and a brick fire-place opposite.

Before I finished my house, wishing to earn ten or twelve dollars by some honest and agreeable method, in order to meet my unusual expenses, I planted about  
30 two acres and a-half of light and sandy soil near it chiefly with beans, but also a small part with potatoes, corn, peas, and turnips. The whole lot contains eleven

acres, mostly growing up to pines and hickories, and was sold the preceding season for eight dollars and eight cents an acre. One farmer said that it was "good for nothing but to raise cheeping squirrels on." I put no manure whatever on this land, not being the owner, but merely a squatter, and not expecting to cultivate so much again, and I did not quite hoe it all once. I got out several cords of stumps in ploughing, which supplied me with fuel for a long time, and left small circles of virgin mould, easily distinguishable 10 through the summer by the greater luxuriance of the beans there. The dead and for the most part unmerchantable wood behind my house, and the driftwood from the pond, have supplied the remainder of my fuel. I was obliged to hire a team and a man for the ploughing, though I held the plough myself.

Bread I at first made of pure Indian meal and salt, genuine hoe-cakes, which I baked before my fire out of doors on a shingle or the end of a stick of timber sawed off in building my house ; but it was wont to get smoked 20 and to have a piny flavour. I tried flour also ; but have at last found a mixture of rye and Indian meal most convenient and agreeable. In cold weather it was no little amusement to bake several small loaves of this in succession, tending and turning them as carefully as an Egyptian his hatching eggs. They were a real cereal fruit which I ripened, and they had to my senses a fragrance like that of other noble fruits, which I kept in as long as possible by wrapping them in cloths. I made a study of the ancient and indispensable art of 30 bread-making, consulting such authorities as offered, going back to the primitive days and first invention of

the unleavened kind, when from the wildness of nuts and meats men first reached the mildness and refinement of this diet, and travelling gradually down in my studies through that accidental souring of the dough which, it is supposed, taught the leavening process, and through the various fermentations thereafter, till I came to "good, sweet, wholesome bread," the staff of life. Leaven, which some deem the soul of bread, the *spiritus* which fills its cellular tissue, which is religiously preserved like the vestal fire,—some precious bottleful, I suppose, first brought over in the *Mayflower*, did the business for America, and its influence is still rising, swelling, spreading, in cereal billows over the land,—this seed I regularly and faithfully procured from the village, till at length one morning I forgot the rules and scalded my yeast; by which accident I discovered that even this was not indispensable,—for my discoveries were not by the synthetic but analytic process,—and I have gladly omitted it since, though most housewives earnestly assured me that safe and wholesome bread without yeast might not be, and elderly people prophesied a speedy decay of the vital forces. Yet I find it not to be an essential ingredient, and after going without it for a year am still in the land of the living; and I am glad to escape the trivialness of carrying a bottleful in my pocket, which would sometimes pop and discharge its contents to my discomfiture. It is simpler and more respectable to omit it. Man is an animal who more than any other can adapt himself to all climates and circumstances. Neither did I put any salt, soda, or other acid or alkali, into my bread. It would seem that I made it according to the receipt which Marcus Porcius

Cato gave about two centuries before Christ. "*Panem depesticium sic facito. Manus mortariumque bene lavato. Farinam in mortarium indito, aquæ paulatim addito, subigitoque pulchre. Ubi bene subegeris, defingito, coquitoque sub testu.*" Which I take to mean—"Make kneaded bread thus: Wash your hands and trough well. Put the meal into the trough, and water gradually, and knead it thoroughly. When you have kneaded it well, mould it, and "bake it under a cover," that is, in a baking-kettle. Not a word about leaven. 10 But I did not always use this staff of life. At one time, owing to the emptiness of my purse, I saw none of it for more than a month.

Every New Englander might easily raise all his own bread-stuffs in this land of rye and Indian corn, and not depend on distant and fluctuating markets for them. Yet so far are we from simplicity and independence that, in Concord, fresh and sweet meal is rarely sold in the shops, and hominy and corn in a still coarser form are hardly used by any. For the most part the 20 farmer gives to his cattle and hogs the grain of his own producing, and buys flour, which is at least no more than wholesome, at a greater cost, at the store. I saw that I could easily raise my bushel or two of rye and Indian corn, for the former will grow on the poorest land, and the latter does not require the best, and grind them in a hand-mill, and so do without rice and pork; and if I must have some concentrated sweet, I found by experiment that I could make a very good molasses either of pumpkins or beets, and I knew that 30 I needed only to set out a few maples to obtain it more easily still, and while these were growing I could use

various substitutes beside those which I have named.  
“For,” as the Forefathers sang,—

“We can make liquor to sweeten our lips  
Of pumpkins and parsnips and walnut-tree chips.”

Finally, as for salt, that grossest of groceries, to obtain this might be a fit occasion for a visit to the sea-shore, or, if I did without it altogether, I should probably drink the less water. I do not learn that the Indians ever troubled themselves to go after it.

10 Thus I could avoid all trade and barter, so far as my food was concerned, and having a shelter already, it would only remain to get clothing and fuel. The pantaloons which I now wear were woven in a farmer's family,—thank Heaven there is so much virtue still in man; for I think the fall from the farmer to the operative as great and memorable as that from the man to the farmer;—and in a new country fuel is an encumbrance. As for a habitat, if I were not permitted still to squat, I might purchase one acre at the same  
20 price for which the land I cultivated was sold—namely, eight dollars and eight cents. But as it was, I considered that I enhanced the value of the land by squatting on it.

There is a certain class of unbelievers who sometimes ask me such questions as, if I think that I can live on vegetable food alone; and to strike at the root of the matter at once,—for the root is faith,—I am accustomed to answer such, that I can live on board nails. If they cannot understand that, they cannot  
30 understand much that I have to say. For my part, I am glad to hear of experiments of this kind being tried; as that a young man tried for a fortnight to

live on hard, raw corn on the ear, using his teeth for all mortar. The squirrel tribe tried the same and succeeded. The human race is interested in these experiments, though a few old women, who are incapacitated for them, or who own their thirds in mills, may be alarmed.

My furniture, part of which I made myself, and the rest cost me nothing of which I have not rendered an account, consisted of a bed, a table, a desk, three chairs, 10 a looking-glass three inches in diameter, a pair of tongs and andirons, a kettle, a skillet, and a frying-pan, a dipper, a wash-bowl, two knives and forks, three plates, one cup, one spoon, a jug for oil, a jug for molasses, and a japanned lamp. None is so poor that he need sit on a pumpkin. That is shiftlessness. There is a plenty of such chairs as I like best in the village garrets to be had for taking them away. Furniture! Thank God, I can sit and I can stand without the aid of a furniture warehouse. What man but a philosopher 20 would not be ashamed to see his furniture packed in a cart and going up country exposed to the light of heaven and the eyes of men, a beggarly account of empty boxes? That is Spaulding's furniture. I could never tell from inspecting such a load whether it belonged to a so-called rich man or a poor one; the owner always seemed poverty-stricken. Indeed, the more you have of such things, the poorer you are. Each load looks as if it contained the contents of a dozen shanties; and if one shanty is poor, this is a dozen times as poor. Pray, 30 for what do we *move* ever but to get rid of our furniture, our *exuviae*; at last to go from this world to another

newly furnished, and leave this to be burned ? It is the same as if all these traps were buckled to a man's belt, and he could not move over the rough country where our lines are cast without dragging them,—dragging his trap. He was a lucky fox that left his tail in the trap. The muskrat will gnaw his third leg off to be free. No wonder man has lost his elasticity. How often he is at a dead set ! “ Sir, if I may be so bold, what do you mean by a dead set ? ” If you are a seer,  
10 whenever you meet a man you will see all that he owns, ay, and much that he pretends to disown, behind him, even to his kitchen furniture and all the trumpery which he saves and will not burn, and he will appear to be harnessed to it and making what headway he can. I think that the man is at a dead set who has got through a knot hole or gateway where his sledge load of furniture cannot follow him. I cannot but feel compassion when I hear some trig, compact-looking man, seemingly free, all girded and ready, speak of his “ furniture,”  
20 as whether it is insured or not. “ But what shall I do with my furniture ? ” My gay butterfly is entangled in a spider's web then. Even those who seem for a long while not to have any, if you inquire more narrowly you will find have some stored in somebody's barn. I look upon England to-day as an old gentleman who is travelling with a great deal of baggage, trumpery which has accumulated from long housekeeping, which he has not the courage to burn ; great trunk, little trunk, bandbox and bundle. Throw away the first three at  
30 least. It would surpass the powers of a well man nowadays to take up his bed and walk, and I should certainly advise a sick one to lay down his bed and run.

When I have met an immigrant tottering under a bundle which contained his all—looking like an enormous wen which had grown out of the nape of his neck—I have pitied him, not because that was his all, but because he had all *that* to carry. If I have got to drag my trap, I will take care that it be a light one and do not nip me in a vital part. But perchance it would be wisest never to put one's paw into it.

I would observe, by the way, that it costs me nothing for curtains, for I have no gazers to shut out but the sun 10 and moon, and I am willing that they should look in. The moon will not sour milk nor taint meat of mine, nor will the sun injure my furniture or fade my carpet, and if he is sometimes too warm a friend, I find it still better economy to retreat behind some curtain which nature has provided, than to add a single item to the details of housekeeping. A lady once offered me a mat, but as I had no room to spare within the house, nor time to spare within or without to shake it, I declined it, preferring to wipe my feet on the sod before my door. It 20 is best to avoid the beginnings of evil.

The customs of some savage nations might, perchance, be profitably imitated by us, for they at least go through the semblance of casting their slough annually; they have the idea of the thing, whether they have the reality or not. Would it not be well if we were to celebrate such a "busk," or "feast of first fruits," as Bartram describes to have been the custom of the Mucclasse Indians? "When a town celebrates the busk," says he, "having previously provided themselves 30 with new clothes, new pots, pans, and other household utensils and furniture, they collect all their worn-out

clothes and other despicable things, sweep and cleanse their houses, squares, and the whole town, of their filth, which, with all the remaining grain and other old provisions, they cast together into one common heap, and consume it with fire. After having taken medicine, and fasted for three days, all the fire in the town is extinguished. During the fast they abstain from the gratification of every appetite and passion whatever. A general amnesty is proclaimed; all malefactors may  
10 return to their town.

“On the fourth morning, the high priest, by rubbing dry wood together, produces new fire in the public square, from whence every habitation in the town is supplied with the new and pure flame.”

They then feast on the new corn and fruits, and dance and sing for three days, “and the four following days they receive visits and rejoice with their friends from neighbouring towns, who have in like manner purified and prepared themselves.”

20 The Mexicans also practised a similar purification at the end of every fifty-two years, in the belief that it was time for the world to come to an end.

I have scarcely heard of a truer sacrament, that is, as the dictionary defines it, “outward and visible sign of an inward and spiritual grace,” than this, and I have no doubt that they were originally inspired directly from Heaven to do this, though they have no biblical record of the revelation.

For more than five years I maintained myself thus  
30 solely by the labour of my hands, and I found, that by working about six weeks in a year, I could meet all the

expenses of living. The whole of my winters, as well as most of my summers, I had free and clear for study.

As I preferred some things to others, and especially valued my freedom, as I could fare hard and yet succeed well, I did not wish to spend my time in earning rich carpets or other fine furniture, or delicate cookery, or a house in the Grecian or the Gothic style just yet. If there are any to whom it is no interruption to acquire these things, and who know how to use them when acquired, I relinquish to them the pursuit. Some 10 are "industrious," and appear to love labour for its own sake, or perhaps because it keeps them out of worse mischief; to such I have at present nothing to say. Those who would not know what to do with more leisure than they now enjoy, I might advise to work twice as hard as they do,—work till they pay for themselves, and get their free papers. For myself I found that the occupation of a day-labourer was the most independent of any, especially as it required only thirty or forty days in a year to support one. The 20 labourer's day ends with the going down of the sun, and he is then free to devote himself to his chosen pursuit, independent of his labour; but his employer, who speculates from month to month, has no respite from one end of the year to the other.

In short, I am convinced, both by faith and experience, that to maintain one's self on this earth is not a hardship but a pastime, if we will live simply and wisely; as the pursuits of the simpler nations are still the sports of the more artificial. It is not necessary 30 that a man should earn his living by the sweat of his brow, unless he sweats easier than I do.

When first I took up my abode in the woods, that is, began to spend my nights as well as days there, which, by accident, was on Independence Day, on the 4th of July, 1845, my house was not finished for winter, but was merely a defence against the rain, without plastering or chimney, the walls being of rough weather-stained boards, with wide chinks, which made it cool at night. The upright white hewn studs and freshly planed door and window-casings gave it a clean and  
10 airy look, especially in the morning, when its timbers were saturated with dew, so that I fancied that by noon some sweet gum would exude from them. To my imagination it retained throughout the day more or less of this auroral character, reminding me of a certain house on a mountain which I had visited the year before. This was an airy, an unplastered cabin, fit to entertain a travelling god, and where a goddess might trail her garments. The winds which passed over my dwelling were such as sweep over the ridges of moun-  
20 tains, bearing the broken strains, or celestial parts only, of terrestrial music. The morning wind forever blows, the poem of creation is uninterrupted ; but few are the ears that hear it. Olympus is but the outside of the earth everywhere.

The only house I had been the owner of before, if I except a boat, was a tent, which I used occasionally when making excursions in the summer, and this is still rolled up in my garret ; but the boat, after passing from hand to hand, has gone down the stream of  
30 time. With this more substantial shelter about me, I had made some progress toward settling in the world. This frame, so slightly clad, was a sort of crystallisation

around me, and reacted on the builder. It was suggestive somewhat as a picture in outlines. I did not need to go out doors to take the air, for the atmosphere within had lost none of its freshness. It was not so much within doors as behind a door where I sat, even in the rainiest weather. The Harivansa says, "An abode without birds is like a meat without seasoning." Such was not my abode, for I found myself suddenly neighbour to the birds; not by having imprisoned one, but having caged myself near them. I<sup>10</sup> was not only nearer to some of those which commonly frequent the garden and the orchard, but to those wilder and more thrilling songsters of the forest which never, or rarely, serenade a villager,—the woodthrush, the veery, the scarlet tanager, the field-sparrow, the whippoorwill, and many others.

I was seated by the shore of a small pond, about a mile and a half south of the village of Concord and somewhat higher than it, in the midst of an extensive wood between that town and Lincoln, and about two<sup>20</sup> miles south of that our only field known to fame, Concord battle ground; but I was so low in the woods that the opposite shore, half a mile off, like the rest, covered with wood, was my most distant horizon. For the first week, whenever I looked out on the pond, it impressed me like a tarn high up on the one side of a mountain, its bottom far above the surface of other lakes, and, as the sun arose, I saw it throwing off its nightly clothing of mist, and here and there, by degrees, its soft ripples or its smooth reflecting surface was<sup>30</sup> revealed, while the mists, like ghosts, were stealthily withdrawing in every direction into the woods, as at

the breaking up of some nocturnal conventicle. The very dew seemed to hang upon the trees later into the day than usual, as on the sides of mountains.

This small lake was of most value as a neighbour in the intervals of a gentle rain-storm in August, when, both air and water being perfectly still, but the sky overcast, mid-afternoon had all the serenity of evening, and the woodthrush sang around, and was heard from shore to shore. A lake like this is never smoother  
10 than at such a time; and the clear portion of the air above it being shallow and darkened by clouds, the water, full of light and reflections, becomes a lower heaven itself so much the more important. From a hill-top near by, where the wood had been recently cut off, there was a pleasing vista southward across the pond, through a wide indentation in the hills which form the shore there, where their opposite sides sloping toward each other suggested a stream flowing out in that direction through a wooded valley, but stream  
20 there was none. That way I looked between and over the near green hills to some distant and higher ones in the horizon, tinged with blue. Indeed, by standing on tip-toe I could catch a glimpse of some of the peaks of the still bluer and more distant mountain ranges in the north-west, those true-blue coins from heaven's own mint, and also of some portion of the village. But in other directions, even from this point, I could not see over or beyond the woods which surrounded me. It is well to have some water in your neighbourhood, to  
30 give buoyancy to and float the earth. One value even of the smallest well is, that when you look into it you see that earth is not continent but insular. This is as

important as that it keeps butter cool. When I looked across the pond from this peak toward the Sudbury meadows, which in time of flood I distinguished elevated perhaps by a mirage in their seething valley, like a coin in a basin, all the earth beyond the pond appeared like a thin crust insulated and floated even by this small sheet of intervening water, and I was reminded that this on which I dwelt was but *dry land*.

I went to the woods because I wished to live deliberately, to front only the essential facts of life, and see 10 if I could not learn what it had to teach, and not, when I came to die, discover that I had not lived. I did not wish to live what was not life, living is so dear; nor did I wish to practise resignation, unless it was quite necessary. I wanted to live deep and suck out all the marrow of life, to live so sturdily and Spartan-like as to put to rout all that was not life, to cut a broad swath and shave close, to drive life into a corner, and reduce it to its lowest terms, and, if it proved to be mean, why then to get the whole and genuine meanness of it, and 20 publish its meanness to the world; or if it were sublime, to know it by experience, and be able to give a true account of it in my next excursion.

Let us spend one day as deliberately as Nature, and not be thrown off the track by every nutshell and mosquito's wing that falls on the rails. Let us rise early and fast, or break fast, gently and without perturbation; let company come and let company go, let the bells ring and the children cry,—determined to make a day of it. Why should we knock under and 30 go with the stream? Let us not be upset and overwhelmed in that terrible rapid and whirlpool called a

dinner, situated in the meridian shallows. Weather this danger and you are safe, for the rest of the way is down hill. With unrelaxed nerves, with morning vigour, sail by it, looking another way, tied to the mast like Ulysses. If the engine whistles, let it whistle till it is hoarse for its pains. If the bell rings, why should we run? We will consider what kind of music they are like. Let us settle ourselves, and work and wedge our feet downward through the mud and slush of opinion, 10 and prejudice, and tradition, and delusion, and appearance, that alluvion which covers the globe, through Paris and London, through New York and Boston and Concord, through church and state, through poetry and philosophy and religion, till we come to a hard bottom and rocks in place, which we can call *reality*, and say, This is, and no mistake; and then begin, having a *point d'appui*, below freshet and frost and fire, a place where you might found a wall or a state, or set a lamp-post safely, or perhaps a gauge, not a Nilometer, 20 but a Realometer, that future ages might know how deep a freshet of shams and appearances had gathered from time to time. If you stand right fronting and face to face to a fact, you will see the sun glimmer on both its surfaces, as if it were a cimeter, and feel its sweet edge dividing you through the heart and marrow, and so you will happily conclude your mortal career. Be it life or death, we crave only reality. If we are really dying, let us hear the rattle in our throats and feel cold in the extremities; if we are alive, let us go about our business.

## II. SOUNDS.

I DID not read books the first summer ; I hoed beans. Nay, I often did better than this. There were times when I could not afford to sacrifice the bloom of the present moment to any work, whether of the head or hands. I love a broad margin to my life. Sometimes, in a summer morning, having taken my accustomed bath, I sat in my sunny doorway from sunrise till noon, rapt in a reverie, amidst the pines and hickories and sumachs, in undisturbed solitude and stillness, while the birds sang around or flitted noiseless through the 10 house, until by the sun falling in at my west window, or the noise of some traveller's waggon on the distant highway, I was reminded of the lapse of time. I grew in those seasons like corn in the night, and they were far better than any work of the hands would have been. They were not time subtracted from my life, but so much over and above my usual allowance. I realised what the Orientals mean by contemplation and the forsaking of works. For the most part, I minded not how the hours went. The day advanced as if to light some work of 20 mine ; it was morning, and lo ! now it is evening, and nothing memorable is accomplished. Instead of singing like the birds, I silently smiled at my incessant good fortune. As the sparrow had its trill, sitting on the

hickory before my door, so had I my chuckle or suppressed warble which he might hear out of my nest. My days were not days of the week, bearing the stamp of any heathen deity, nor were they minced into hours and fretted by the ticking of a clock; for I lived like the Puri Indians, of whom it is said that "for yesterday, to-day, and to-morrow they have only one word, and they express the variety of meaning by pointing backward for yesterday, forward for to-morrow, and  
10 overhead for the passing day." This was sheer idleness to my fellow-townsmen, no doubt; but if the birds and flowers had tried me by their standard, I should not have been found wanting. A man must find his occasions in himself, it is true. The natural day is very calm, and will hardly reprove his indolence.

I had this advantage, at least, in my mode of life, over those who were obliged to look abroad for amusement, to society and the theatre, that my life itself was become my amusement and never ceased to be novel.  
20 It was a drama of many scenes and without an end. If we were always indeed getting our living, and regulating our lives according to the last and best mode we had learned, we should never be troubled with ennui. Follow your genius closely enough, and it will not fail to show you a fresh prospect every hour. Housework was a pleasant pastime. When my floor was dirty, I rose early, and, setting all my furniture out of doors on the grass, bed and bedstead making but one budget, dashed water on the floor, and sprinkled white sand  
30 from the pond on it, and then with a broom scrubbed it clean and white; and by the time the villagers had broken their fast the morning sun had dried my house

sufficiently to allow me to move in again, and my meditations were almost uninterrupted. It was pleasant to see my whole household effects on the grass, making a little pile like a gipsy's pack, and my three-legged table, from which I did not remove the books and pen and ink, standing amid the pines and hickories. They seemed glad to get out themselves, and as if unwilling to be brought in. I was sometimes tempted to stretch an awning over them and take my seat there. It was worth the while to see the sun shine on these things, 10 and hear the free wind blow on them; so much more interesting most familiar objects look out of doors than in the house. A bird sits on the next bough, life-everlasting grows under the table, and blackberry vines run round its legs; pine cones, chestnut burs, and strawberry leaves are strewn about. It looks as if this was the way these forms came to be transferred to our furniture, to tables, chairs, and bedsteads,—because they once stood in their midst.

My house was on the side of a hill, immediately on 20 the edge of the larger wood, in the midst of a young forest of pitch pines and hickories, and half-a-dozen rods from the pond, to which a narrow footpath led down the hill. In my front yard grew the strawberry, blackberry, and life-everlasting, johnswort and golden-rod, shrub-oaks and sand-cherry, blueberry and ground-nut. Near the end of May, the sand-cherry (*Cerasus pumila*) adorned the sides of the path with its delicate flowers arranged in umbels cylindrically about its short stems, which last, in the fall, weighed down with good- 30 sized and handsome cherries, fell over in wreaths like rays on every side. I tasted them out of compliment

to Nature, though they were scarcely palatable. The sumach (*Rhus glabra*) grew luxuriantly about the house, pushing up through the embankment which I had made, and growing five or six feet the first season. Its broad pinnate tropical leaf was pleasant though strange to look on. The large buds, suddenly pushing out late in the spring from dry sticks which had seemed to be dead, developed themselves as by magic into graceful green and tender boughs, an inch in diameter; and  
10 sometimes, as I sat at my window, so heedlessly did they grow and tax their weak joints, I heard a fresh and tender bough suddenly fall like a fan to the ground, when there was not a breath of air stirring, broken off by its own weight. In August, the large masses of berries, which, when in flower, had attracted many wild bees, gradually assumed their bright velvety crimson hue, and by their weight again bent down and broke the tender limbs.

As I sit at my window this summer afternoon, hawks  
20 are circling about my clearing; the tantivy of wild pigeons, flying by two and threes athwart my view, or perching restless on the white-pine boughs behind my house, gives a voice to the air; a fish-hawk dimples the glassy surface of the pond and brings up a fish; a mink steals out of the marsh before my door and seizes a frog by the shore; the sedge is bending under the weight of the reed-birds fitting hither and thither; and for the last half-hour I have heard the rattle of railroad-cars, now dying away and then reviving like  
30 the beat of a partridge, conveying travellers from Boston to the country. For I did not live so out of

the world as that boy, who, as I hear, was put out to a farmer in the east part of the town, but ere long ran away and came home again, quite down at the heel and home-sick. He had never seen such a dull and out-of-the-way place; the folks were all gone off somewhere; why, you couldn't even hear the whistle! I doubt if there is such a place in Massachusetts now:—

“In truth, our village has become a butt  
For one of those fleet railroad shafts, and o'er  
Our peaceful plain its soothing sound is—Concord.” 10

The Fitchburg Railroad touches the pond about a hundred rods south of where I dwell. I usually go to the village along its causeway, and am, as it were, related to society by this link. The men on the freight trains, who go over the whole length of the road, bow to me as to an old acquaintance, they pass me so often, and apparently they take me for an employee: and so I am. I too would fain be a track-repairer somewhere in the orbit of the earth.

The whistle of the locomotive penetrates my woods 20  
summer and winter, sounding like the scream of a hawk sailing over some farmer's yard, informing me that many restless city merchants are arriving within the circle of the town, or adventurous country traders from the other side. As they come under one horizon, they shout their warning to get off the track to the other, heard sometimes through the circles of two towns. Here come your groceries, country; your rations, countrymen! Nor is there any man so independent on his farm that he can say them nay. And 30  
here's your pay for them! screams the countryman's whistle; timber like long battering-rams going twenty

miles an hour against the city walls, and chairs enough to seat all the weary and heavy-laden that dwell within them. With such huge and lumbering civility the country hands a chair to the city. All the Indian huckleberry hills are stripped, all the cranberry meadows are raked into the city. Up comes the cotton, down goes the woven cloth ; up comes the silk, down goes the woollen ; up come the books, but down goes the wit that writes them.

- 10 When I meet the engine with its train of cars moving off with planetary motion,—or, rather, like a comet, for the beholder knows not if with that velocity and with that direction it will ever revisit this system, since its orbit does not look like a returning curve,—with its steam-cloud like a banner streaming behind in golden and silver wreaths, like many a downy cloud which I have seen, high in the heavens, unfolding its masses to the light,—as if this travelling demigod, this cloud-compeller, would ere long take the sunset sky for the  
20 livery of his train ; when I hear the iron horse make the hills echo with his snort like thunder, shaking the earth with his feet, and breathing fire and smoke from his nostrils (what kind of winged horse or fiery dragon they will put into the new Mythology I don't know), it seems as if the earth had got a race now worthy to inhabit it. If all were as it seems, and men made the elements their servants for noble ends ! If the cloud that hangs over the engine were the perspiration of heroic deeds, or as beneficent as that which floats over the farmer's fields,  
30 then the elements and Nature herself would cheerfully accompany men on their errands and be their escort.

I watch the passage of the morning cars with the same feeling that I do the rising of the sun, which is hardly more regular. Their train of clouds stretching far behind and rising higher and higher, going to heaven while the cars are going to Boston, conceals the sun for a minute and casts my distant field into the shade, a celestial train beside which the petty train of cars which hugs the earth is but the barb of the spear. The stabler of the iron horse was up early this winter morning by the light of the stars amid the 10 mountains, to fodder and harness his steed. Fire, too, was awakened thus early to put the vital heat in him and get him off. If the enterprise were as innocent as it is early! If the snow lies deep, they strap on his snow-shoes, and with the giant plough plough a furrow from the mountains to the sea-board, in which the cars, like a following drill-barrow, sprinkle all the restless men and floating merchandise in the country for seed. All day the fire-steed flies over the country, stopping only that his master may rest, and I am 20 awakened by his tramp and defiant snort at midnight, when in some remote glen in the woods he fronts the elements incased in ice and snow; and he will reach his stall only with the morning star, to start once more on his travels without rest or slumber. Or perchance, at evening, I hear him in his stable blowing off the superfluous energy of the day, that he may calm his nerves and cool his liver and brain for a few hours of iron slumber. If the enterprise were as heroic and commanding as it is protracted and unwearied! 30

Far through unfrequented woods on the confines of towns, where once only the hunter penetrated by day,

in the darkest night dart these bright saloons without the knowledge of their inhabitants ; this moment stopping at some brilliant station-house in town or city, where a social crowd is gathered, the next in the Dismal Swamp, scaring the owl and fox. The startings and arrivals of the cars are now the epochs in the village day. They go and come with such regularity and precision, and their whistle can be heard so far, that the farmers set their clocks by them, and thus one well-conducted  
10 institution regulates a whole country. Have not men improved somewhat in punctuality since the railroad was invented ? Do they not talk and think faster in the depôt than they did in the stage-office ? There is something electrifying in the atmosphere of the former place. I have been astonished at the miracles it has wrought ; and some of my neighbours, who, I should have prophesied, once for all, would never get to Boston by so prompt a conveyance, are on hand when the bell rings. To do things " railroad fashion " is now the by-  
20 word ; and it is worth the while to be warned so often and so sincerely by any power to get off its track. There is no stopping to read the riot act, no firing over the heads of the mob, in this case. We have constructed a fate, an *Atropos*, that never turns aside. (Let that be the name of your engine.) Men are advertised that at a certain hour and minute these bolts will be shot toward particular points of the compass ; yet it interferes with no man's business, and the children go to school on the other track. We live the steadier for it. We are all  
30 educated thus to be sons of Tell. The air is full of invisible bolts. Every path but your own is the path of fate. Keep on your own track, then.

What recommends commerce to me is its enterprise and bravery. It does not clasp its hands and pray to Jupiter. I see these men every day go about their business with more or less courage and content, doing more even than they suspect, and perchance better employed than they could have consciously devised. I am less affected by their heroism who stood up for half-an-hour in the front line at Buena Vista, than by the steady and cheerful valour of the men who inhabit the snow-plough for their winter quarters; who have 10 not merely the three o'clock in the morning courage, which Bonaparte thought was the rarest, but whose courage does not go to rest so early, who go to sleep only when the storm sleeps or the sinews of their iron steed are frozen. On this morning of the Great Snow, perchance, which is still raging and chilling men's blood, I hear the muffled tone of their engine bell from out the fog-bank of their chilled breath, which announces that the cars *are coming*, without long delay, notwithstanding the veto of a New England north-east snow- 20 storm, and I behold the ploughmen covered with snow and rime, their heads peering above the mould-board which is turning down other than daisies and the nests of field-mice, like boulders of the Sierra Nevada, that occupy an outside place in the universe.

Commerce is unexpectedly confident and serene, alert, adventurous, and unwearied. It is very natural in its methods, withal, far more so than many fantastic enterprises and sentimental experiments, and hence its singular success. I am refreshed and expanded when 30 the freight train rattles past me, and I smell the stores which go dispensing their odours all the way from

Long Wharf to Lake Champlain, reminding me of foreign parts, of coral reefs, and Indian oceans, and tropical climes, and the extent of the globe. I feel more like a citizen of the world at the sight of the palm-leaf which will cover so many flaxen New England heads the next summer, the Manilla hemp and cocoa-nut husks, the old junk, gunny bags, scrap iron, and rusty nails. This car-load of torn sails is more legible and interesting now than if they should be  
10 wrought into paper and printed books. Who can write so graphically the history of the storms they have weathered as these rents have done? They are proof-sheets which need no correction. Here goes lumber from the Maine woods, which did not go out to sea in the last freshet, risen four dollars on the thousand because of what did go out or was split up; pine, spruce, cedar,—first, second, third, and fourth qualities, so lately all of one quality, to wave over the bear, and moose, and caribou. Next rolls Thomaston lime, a prime lot,  
20 which will get far among the hills before it gets slacked. These rags in bales, of all hues and qualities, the lowest condition to which cotton and linen descend, the final result of dress,—of patterns which are now no longer cried up, unless it be in Milwaukie, as those splendid articles, English, French, or American prints, gingham, muslins, etc.—gathered from all quarters both of fashion and poverty, going to become paper of one colour or a few shades only, on which, forsooth, will be written tales of real life, high and low, and founded on  
30 fact! This closed car smells of salt fish, the strong New England and commercial scent, reminding me of the Grand Banks and the fisheries. Who has not seen

a salt fish, thoroughly cured for this world, so that nothing can spoil it, and putting the perseverance of the saints to the blush? with which you may sweep or pave the streets, and split your kindlings, and the teamster shelter himself and his lading against sun, wind, and rain behind it,—and the trader, as a Concord trader once did, hang it up by his door for a sign when he commences business, until at last his oldest customer cannot tell surely whether it be animal, vegetable, or mineral, and yet it shall be as pure as a 10 snowflake, and if it be put into a pot and boiled, will come out an excellent dun fish for a Saturday's dinner. Next, Spanish hides, with the tails still preserving their twist and the angle of elevation they had when the oxen that wore them were careering over the pampas of the Spanish main,—a type of all obstinacy, and evincing how almost hopeless and incurable are all constitutional vices. I confess, that practically speaking, when I have learned a man's real disposition, I have no hopes of changing it for the better or worse in 20 this state of existence. As the Orientals say, "A cur's tail may be warmed, and pressed, and bound round with ligatures, and after a twelve years' labour bestowed upon it, still it will retain its natural form." The only effectual cure for such inveteracies as these tails exhibit is to make glue of them, which I believe is what is usually done with them, and then they will stay put and stick. Here is a hogshhead of molasses or of brandy directed to John Smith, Cuttingsville, Vermont, some trader among the Green Mountains, who imports for 30 the farmers near his clearing, and now perchance stands over his bulk-head and thinks of the last arrivals on

the coast, how they may affect the price for him, telling his customers this moment, as he has told them twenty times before this morning, that he expects some by the next train of prime quality. It is advertised in the *Cuttingsville Times*.

While these things go up other things come down. Warned by the whizzing sound, I look up from my book and see some tall pine, hewn on far northern hills, which has winged its way over the Green Mountains  
10 and the Connecticut, shot like an arrow through the township within ten minutes, and scarce another eye beholds it; going

“to be the mast  
Of some great ammiral.”

And hark! here comes the cattle-train bearing the cattle of a thousand hills, sheepcots, stables, and cow-yards in the air, drovers with their sticks, and shepherd boys in the midst of their flocks, all but the mountain pastures, whirled along like leaves blown from the  
20 mountains by the September gales. The air is filled with the bleating of calves and sheep, and the hustling of oxen, as if a pastoral valley were going by. When the old bell-wether at the head rattles his bell, the mountains do indeed skip like rams and the little hills like lambs. A car-load of drovers, too, in the midst, on a level with their droves now, their vocation gone, but still clinging to their useless sticks as their badge of office. But their dogs, where are they? It is a stampede to them; they are quite thrown out; they  
30 have lost the scent. Methinks I hear them barking behind the Peterboro' Hills, or panting up the western slope of the Green Mountains. They will not be in at

the death. Their vocation, too, is gone. Their fidelity and sagacity are below par now. They will slink back to their kennels in disgrace, or perchance run wild and strike a league with the wolf and the fox. So is your pastoral life whirled past and away. But the bell rings, and I must get off the track and let the cars go by—

“What’s the railroad to me ?

I never go to see

Where it ends.

It fills a few hollows,

And makes banks for the swallows,

It sets the sand a-blowing,

And the blackberries a-growing.”

10

but I cross it like a cart-path in the woods. I will not have my eyes put out and my ears spoiled by its smoke, and steam, and hissing.

Now that the cars are gone by and all the restless world with them, and the fishes in the pond no longer feel their rumbling, I am more alone than ever. For the rest of the long afternoon, perhaps, my meditations 20 are interrupted only by the faint rattle of a carriage or team along the distant highway.

Sometimes, on Sundays, I heard the bells, the Lincoln, Acton, Bedford, or Concord bell, when the wind was favourable, a faint, sweet, and, as it were, natural melody, worth importing into the wilderness. At a sufficient distance over the woods this sound acquires a certain vibratory hum, as if the pine needles in the horizon were the strings of a harp which it swept. All sound heard at the greatest possible distance produces 30 one and the same effect, a vibration of the universal

lyre, just as the intervening atmosphere makes a distant ridge of earth interesting to our eyes by the azure tint it imparts to it. There came to me in this case a melody which the air had strained, and which had conversed with every leaf and needle of the wood, that portion of the sound which the elements had taken up and modulated and echoed from vale to vale. The echo is, to some extent, an original sound, and therein is the magic and charm of it. It is not merely a repetition of what  
10 was worth repeating in the bell, but partly the voice of the wood; the same trivial words and notes sung by a wood-nymph.

At evening, the distant lowing of some cow in the horizon beyond the woods sounded sweet and melodious, and at first I would mistake it for the voices of certain minstrels by whom I was sometimes serenaded, who might be straying over hill and dale; but soon I was not unpleasantly disappointed when it was prolonged into the cheap and natural music of the cow. I do not  
20 mean to be satirical, but to express my appreciation of those youths' singing, when I state that I perceived clearly that it was akin to the music of the cow, and they were at length one articulation of Nature.

Regularly at half-past seven, in one part of the summer, after the evening train had gone by, the whippoorwills chanted their vespers for half-an-hour, sitting on a stump by my door, or upon the ridge pole of the house. They would begin to sing almost with as much precision as a clock, within five minutes of a particular time,  
30 referred to the setting of the sun, every evening. I had a rare opportunity to become acquainted with their habits. Sometimes I heard four or five at once in

different parts of the wood, by accident one a bar behind another, and so near me that I distinguished not only the cluck after each note, but often that singular buzzing sound like a fly in a spider's web, only proportionally louder. Sometimes one would circle round and round me in the woods a few feet distant as if tethered by a string, when probably I was near its eggs. They sang at intervals throughout the night, and were again as musical as ever just before and about dawn.

When other birds are still the screech owls take up 10 the strain, like mourning women their ancient u-lu-lu. Their dismal scream is truly Ben Jonsonian. Wise midnight hags! It is no honest and blunt tu-whit tu-who of the poets, but, without jesting, a most solemn graveyard ditty, the mutual consolations of suicide lovers remembering the pangs and the delights of supernal love in the infernal groves. Yet I love to hear their wailing, their doleful responses, trilled along the wood-side; reminding me sometimes of music and singing birds; as if it were the dark and tearful side of music, 20 the regrets and sighs that would fain be sung. They are the spirits, the low spirits and melancholy forebodings, of fallen souls that once in human shape nightly walked the earth and did the deeds of darkness, now expiating their sins with their wailing hymns or threnodies in the scenery of their transgressions. They give me a new sense of the variety and capacity of that nature which is our common dwelling. *Oh-o-o-o-o that I never had been bor-r-r-r-n!* sighs one on this side of the pond, and circles with the restlessness of despair 30 to some new perch on the grey oaks. Then—*That I never had been bor-r-r-r-n!* echoes another on the farther

side with tremulous sincerity, and—*bor-r-r-r-n!* comes faintly from far in the Lincoln woods.

I was also serenaded by a hooting owl. Near at hand you could fancy it the most melancholy sound in Nature, as if she meant by this to stereotype and make permanent in her choir the dying moans of a human being,—some poor weak relic of mortality who has left hope behind, and howls like an animal, yet with human sobs, on entering the dark valley, made  
10 more awful by a certain gurgling melodiousness,—I find myself beginning with the letters *gl* when I try to imitate it,—expressive of a mind which has reached the gelatinous mildewy stage in the mortification of all healthy and courageous thought. It reminded me of ghouls and idiots and insane howlings. But now one answers from far woods in a strain made really melodious by distance,—*Hoo hoo hoo, hoorer hoo*; and indeed for the most part it suggested only pleasing associations, whether heard by day or night, summer or  
20 winter.

I rejoice that there are owls. Let them do the idiotic and maniacal hooting for men. It is a sound admirably suited to swamps and twilight woods which no day illustrates, suggesting a vast and undeveloped nature which men have not recognised. They represent the stark twilight and unsatisfied thoughts which all have. All day the sun has shone on the surface of some savage swamp, where the single spruce stands  
30 above, and the chickadee lisps amid the evergreens, and the partridge and rabbit skulk beneath; but now a more dismal and fitting day dawns, and a different race

of creatures awakes to express the meaning of Nature there.

Late in the evening I heard the distant rumbling of waggons over bridges,—a sound heard farther than almost any other at night,—the baying of dogs, and sometimes again the lowing of some disconsolate cow in a distant barn-yard. In the meanwhile all the shore rang with the trump of bull-frogs, the sturdy spirits of ancient wine-bibbers and wassailers, still unrepentant, trying to sing a catch in their Stygian lake,—if the 10  
Walden nymphs will pardon the comparison, for though there are almost no weeds, there are frogs there,—who would fain keep up the hilarious rules of their old festal tables, though their voices have waxed hoarse and solemnly grave, mocking at mirth, and the wine has lost its flavour, and become only liquor to distend their paunches, and sweet intoxication never comes to drown the memory of the past, but mere saturation and water-loggedness and distention. The most aldermanic, with his chin upon a heart-leaf, which serves for a napkin to 20  
his drooling chaps, under this northern shore quaffs a deep draught of the once scorned water, and passes round a cup with the ejaculation *tr-r-r-oonk*, *tr-r-r-oonk*, *tr-r-r-oonk*! and straightway comes over the water from some distant cove the same pass-word repeated, where the next in seniority and girth has gulped down to his mark; and when this observance has made the circuit of the shores, then ejaculates the master of ceremonies, with satisfaction, *tr-r-r-oonk*! and each in his turn repeats the same down to the least distended, leakiest, 30  
and flabbiest paunched, that there be no mistake; and then the bowl goes round again and again, until the

sun disperses the morning mist, and only the patriarch is not under the pond, but vainly bellowing *troonk* from time to time, and pausing for a reply.

I am not sure that ever I heard the sound of cock-crowing from my clearing, and I thought that it might be worth the while to keep a cockerel for his music merely, as a singing bird. The note of this once wild Indian pheasant is certainly the most remarkable of any bird's, and if they could be naturalised without  
10 being domesticated, it would soon become the most famous sound in our woods, surpassing the clangour of the goose and the hooting of the owl; and then imagine the cackling of the hens to fill the pauses when their lords' clarions rested! No wonder that man added this bird to his tame stock,—to say nothing of the eggs and drumsticks. To walk in a winter morning in a wood where these birds abounded, their native woods, and hear the wild cockerels crow on the trees, clear and shrill for miles over the resounding earth,  
20 drowning the feebler notes of other birds,—think of it! It would put nations on the alert. Who would not be early to rise, and rise earlier and earlier every successive day of his life, till he became unspeakably healthy, wealthy, and wise? This foreign bird's note is celebrated by the poets of all countries along with the notes of their native songsters. All climates agree with brave Chanticleer. He is more indigenous even than the natives. His health is ever good, his lungs are sound, his spirits never flag. Even the sailor on the Atlantic and Pacific  
30 is awakened by his voice; but its shrill sound never roused me from my slumbers. I kept neither dog, cat, cow, pig, nor hens, so that you would have said

there was a deficiency of domestic sounds; neither the churn, nor the spinning-wheel, nor even the singing of the kettle, nor the hissing of the urn, nor children crying, to comfort one. An old-fashioned man would have lost his senses or died of ennui before this. Not even rats in the wall, for they were starved out, or rather were never baited in,—only squirrels on the roof and under the floor, a whippoorwill on the ridge-pole, a blue-jay screaming beneath the window, a hare or woodchuck under the house, a screech-owl, or a cat-owl 10 behind it, a flock of wild geese or a laughing loon on the pond, and a fox to bark in the night. Not even a lark or an oriole, those mild plantation birds, ever visited my clearing. No cockerels to crow now nor hens to cackle in the yard. No yard! but unfenced Nature reaching up to your very sills. A young forest growing up under your windows, and wild sumachs and blackberry vines breaking through your cellar; sturdy pitch-pines rubbing and creaking against the shingles for want of room, their roots reaching quite 20 under the house. Instead of a scuttle or a blind blown off in the gale,—a pine tree snapped off or torn up by the roots behind your house for fuel. Instead of no path to the front yard gate in the Great Snow,—no gate,—no front yard,—and no path to the civilised world!

### III. SOLITUDE AND COMPANY.

THIS is a delicious evening, when the whole body is one sense, and imbibes delight through every pore. I go and come with a strange liberty in Nature, a part of herself. As I walk along the stony shore of the pond in my shirt sleeves, though it is cool as well as cloudy and windy, and I see nothing special to attract me, all the elements are unusually congenial to me. The bull-frogs trump to usher in the night, and the note of the whippoorwill is borne on the rippling wind from  
10 over the water. Sympathy with the fluttering alder and poplar leaves almost takes away my breath; yet, like the lake, my serenity is rippled, but not ruffled. These small waves raised by the evening wind are as remote from storm as the smooth reflecting surface. Though it is now dark, the wind still blows and roars in the wood, the waves still dash, and some creatures lull the rest with their notes. The repose is never complete. The wildest animals do not repose, but seek their prey now; the fox, and skunk, and rabbit, now roam the  
20 fields and woods without fear. They are Nature's watchmen,—links which connect the days of animated life.

When I return to my house I find that visitors have been there and left their cards—either a bunch of flowers, or a wreath of evergreen, or a name in pencil

on a yellow walnut leaf or a chip. They who come rarely to the woods take some little piece of the forest into their hands to play with by the way, which they leave, either intentionally or accidentally. One has peeled a willow wand, woven it into a ring, and dropped it on my table. I could always tell if visitors had called in my absence, either by the bended twigs or grass, or the print of their shoes, and generally of what sex, or age, or quality they were by some slight trace left, as a flower dropped, or a bunch of grass plucked and thrown 10 away, even as far off as the railroad, half a mile distant, or by the lingering odour of a cigar or pipe. Nay, I was frequently notified of the passage of a traveller along the highway sixty rods off by the scent of his pipe.

There is commonly sufficient space about us. Our horizon is never quite at our elbows. The thick wood is not just at our door, nor the pond, but somewhat is always clearing, familiar and worn by us, appropriated and fenced in some way, and reclaimed from Nature. 20 For what reason have I this vast range and circuit, some square miles of unfrequented forest, for my privacy, abandoned to me by men? My nearest neighbour is a mile distant, and no house is visible from any place but the hill-tops within half a mile of my own. I have my horizon bounded by woods all to myself; a distant view of the railroad where it touches the pond on the one hand, and of the fence which skirts the woodland road on the other. But for the most part it is as solitary where I live as on the prairies. It is as 30 much Asia or Africa as New England. I have, as it were, my own sun, and moon, and stars, and a little

world all to myself. At night there was never a traveller passed my house, or knocked at my door, more than if I were the first or last man, unless it were in the spring, when at long intervals some came from the village to fish for pouts,—they plainly fished much more in the Walden Pond of their own natures, and baited their hooks with darkness,—but they soon retreated, usually with light baskets, and left “the world to darkness and to me,” and the black kernel of the night was never  
10 profaned by any human neighbourhood. I believe that men are generally still a little afraid of the dark, though the witches are all hung, and Christianity and candles have been introduced.

Yet I experienced sometimes that the most sweet and tender, the most innocent and encouraging society may be found in any natural object, even for the poor misanthrope and most melancholy man. There can be no very black melancholy to him who lives in the midst of Nature, and has his senses still. There was  
20 never yet such a storm, but it was Æolian music to a healthy and innocent ear. Nothing can rightly compel a simple and brave man to a vulgar sadness. While I enjoy the friendship of the seasons I trust that nothing can make life a burden to me. The gentle rain which waters my beans and keeps me in the house to-day is not drear and melancholy, but good for me too. Though it prevents my hoeing them, it is of far more worth than my hoeing. If it should continue so long  
as to cause the seeds to rot in the ground and destroy  
30 the potatoes in the low lands, it would still be good for the grass on the uplands, and, being good for the grass, it would be good for me. Sometimes, when I

compare myself with other men, it seems as if I were more favoured by the gods than they, beyond any deserts that I am conscious of—as if I had a warrant and surety at their hands which my fellows have not, and were especially guided and guarded. I do not flatter myself, but if it be possible they flatter me. I have never felt lonesome, or in the least oppressed by a sense of solitude, but once, and that was a few weeks after I came to the woods, when, for an hour, I doubted if the near neighbourhood of man was not essential to 10 a serene and healthy life. To be alone was something unpleasant. But I was at the same time conscious of a slight insanity in my mood, and seemed to foresee my recovery. In the midst of a gentle rain, while these thoughts prevailed, I was suddenly sensible of such sweet and beneficent society in Nature, in the very pattering of the drops, and in every sound and sight around my house, an infinite and unaccountable friendliness all at once like an atmosphere sustaining me, as made the fancied advantages of human neighbourhood 20 insignificant, and I have never thought of them since.

I have a great deal of company in my house; especially in the morning, when nobody calls. Let me suggest a few comparisons, that some one may convey an idea of my situation. I am no more lonely than the loon in the pond that laughs so loud, or than Walden Pond itself. What company has that lonely lake, I pray? And yet it has not the blue-devils, but the blue angels in it, in the azure tint of its waters. The sun is alone, 30 except in thick weather, when there sometimes appear to be two, but one is a mock sun. God is alone,—

but the devil, he is far from being alone ; he sees a great deal of company ; he is legion. I am no more lonely than a single mullein or dandelion in a pasture, or a bean leaf, or sorrel, or a horse-fly, or a humble bee. I am no more lonely than the Mill Brook, or a weathercock, or the north star, or the south wind, or an April shower, or a January thaw, or the first spider in a new house.

I have occasional visits in the long winter evenings,  
10 when the snow falls fast and the wind howls in the wood, from an old settler and original proprietor, who is reported to have dug Walden Pond, and stoned it, and fringed it with pine woods : who tells me stories of old time and of new eternity ; and between us we manage to pass a cheerful evening with social mirth and pleasant views of things, even without apples or cider,—a most wise and humorous friend, whom I love much, who keeps himself more secret than ever did Goffe or Whalley ; and though he is thought to be  
20 dead, none can show where he is buried. An elderly dame, too, dwells in my neighbourhood, invisible to most persons, in whose odorous herb garden I love to stroll sometimes, gathering simples and listening to her fables ; for she has a genius of unequalled fertility, and her memory runs back farther than mythology, and she can tell me the original of every fable, and on what fact every one is founded, for the incidents occurred when she was young. A ruddy and lusty old dame, who delights in all weathers and seasons, and is likely  
30 to outlive all her children yet.

The indescribable innocence and beneficence of Nature,—of sun, and wind, and rain, of summer and

winter,—such health, such cheer, they afford for ever ! and such sympathy have they ever with our race, that all Nature would be affected, and the sun's brightness fade, and the winds would sigh humanely, and the clouds rain tears, and the woods shed their leaves and put on mourning in midsummer, if any man should ever for a just cause grieve. Shall I not have intelligence with the earth ? Am I not partly leaves and vegetable mould myself ?

What is the pill which will keep us well, serene, 10 contented ? Not my or thy great-grandfather's, but our great-grandmother Nature's universal, vegetable, botanic medicines, by which she has kept herself young always, outlived so many old Parrs in her day, and fed her health with their decaying fatness. For my panacea instead of one of those quack vials of a mixture dipped from Acheron and the Dead Sea, which come out of those long shallow black-schooner-looking waggons which we sometimes see made to carry bottles, let me have a draught of undiluted morning air. Morning 20 air ! If men will not drink of this at the fountain-head of the day, why, then, we must even bottle up some and sell it in the shops, for the benefit of those who have lost their subscription ticket to morning time in this world. But remember, it will not keep quite till noonday even in the coolest cellar, but drive out the stopples long ere that and follow westward the steps of Aurora. I am no worshipper of Hygeia, who was the daughter of that old herb-doctor Æsculapius, and who is represented on monuments holding a serpent in one hand, and 30 in the other a cup out of which the serpent sometimes drinks ; but rather of Hebe, cup-bearer to Jupiter, who

was the daughter of Juno and wild lettuce, and who had the power of restoring gods and men to the vigour of youth. She was probably the only thoroughly sound-conditioned, healthy, and robust young lady that ever walked the globe, and whenever she came it was spring.

I think that I love society as much as most, and am ready enough to fasten myself like a blood-sucker for the time to any full-blooded man that comes in my  
10 way. I am naturally no hermit, but might possibly sit out the sturdiest frequenter of the bar-room, if my business called me thither.

I had three chairs in my house ; one for solitude, two for friendship, three for society. When visitors came in larger and unexpected numbers there was but the third chair for them all, but they generally economised the room by standing up. It is surprising how many great men and women a small house will contain. I have had twenty-five or thirty souls, with their bodies,  
20 at once under my roof, and yet we often parted without being aware that we had come very near to one another. Many of our houses, both public and private, with their almost innumerable apartments, their huge halls and their cellars for the storage of wines and other munitions of peace, appear to me extravagantly large for their inhabitants. They are so vast and magnificent that the latter seem to be only vermin which infest them. I am surprised when the herald blows his summons before some Tremont, or Astor, or Middlesex House, to see  
30 come creeping out over the piazza for all inhabitants a 'ridiculous mouse, which soon again slinks into some hole in the pavement.

My "best" room, however—my withdrawing-room—always ready for company, on whose carpet the sun rarely fell, was the pine wood behind my house. Thither in summer days, when distinguished guests came, I took them, and a priceless domestic swept the floor, and dusted the furniture, and kept the things in order.

If one guest came he sometimes partook of my frugal meal, and it was no interruption to conversation to be stirring a hasty-pudding, or watching the rising and maturing of a loaf of bread in the ashes, in the meanwhile. 10 But if twenty came and sat in my house there was nothing said about dinner, though there might be bread enough for two, more than if eating were a forsaken habit; but we naturally practised abstinence; and this was never felt to be an offence against hospitality, but the most proper and considerate course. The waste and decay of physical life, which so often needs repair, seemed miraculously retarded in such a case, and the vital vigour stood its ground. I could entertain thus a thousand as well as twenty; and if any ever went 20 away disappointed or hungry from my house when they found me at home, they may depend upon it that I sympathised with them at least. So easy is it, though many housekeepers doubt it, to establish new and better customs in the place of the old. You need not rest your reputation on the dinners you give. For my own part, I was never so effectually deterred from frequenting a man's house, by any kind of Cerberus whatever, as by the parade one made about dining me, which I took to be a very polite and roundabout hint never to trouble 30 him so again. I think I shall never revisit those scenes. I should be proud to have for the motto of my cabin

those lines of Spenser which one of my visitors inscribed on a yellow walnut leaf for a card :—

“ Arrivé there, the little house they fill,  
Ne look for entertainment where none was ;  
Rest is their feast, and all things at their will :  
The noblest mind the best contentment has.”

I could not but notice some of the peculiarities of my visitors. Girls and boys and young women generally seemed glad to be in the woods. They looked in  
10 the pond and at the flowers, and improved their time. Men of business, even farmers, thought only of solitude and employment, and of the great distance at which I dwelt from something or other ; and though they said that they loved a ramble in the woods occasionally, it was obvious that they did not. Restless, committed men, whose time was all taken up in getting a living or keeping it ; ministers who spoke of God as if they enjoyed a monopoly of the subject, who could not bear all kinds of opinions ; doctors, lawyers, uneasy house-  
20 keepers who pried into my cupboard and bed when I was out,—how came Mrs.—— to know that my sheets were not as clean as hers ?—young men who had ceased to be young, and had concluded that it was safest to follow the beaten track of the professions,—all these generally said that it was not possible to do so much good in my position. Ay ! there was the rub. The old and infirm and the timid, of whatever age or sex, thought most of sickness, and sudden accident, and death ; to them life seemed full of danger,—what  
30 danger is there if you don't think of any ?—and they thought that a prudent man would carefully select the safest position, where Dr. B—— might be on hand at

a moment's warning. To them the village was literally a *com-munity*, a league for mutual defence, and you would suppose that they would not go a-huckleberrying without a medicine chest. The amount of it is, if a man is alive, there is always *danger* that he may die, though the danger must be allowed to be less in proportion as he is dead-and-alive to begin with. A man sits as many risks as he runs. Finally, there were the self-styled reformers, the greatest bores of all, who thought that I was for ever singing,—

10

“ This is the house that I built ;

    This is the man that lives in the house that I built ; ”

but they did not know that the third line was,—

“ These are the folks that worry the man

    That lives in the house that I built.”

I did not fear the hen-harriers, for I kept no chickens, but I feared the men-harriers rather.

I had more cheering visitors than the last. Children come a-berrying, railroad men taking a Sunday morning walk in clean shirts, fishermen and hunters, poets and 20 philosophers, in short, all honest pilgrims, who came out to the woods for freedom's sake, and really left the village behind, I was ready to greet with,—“ Welcome, Englishmen ! welcome, Englishmen ! ” for I had had communication with that race.

#### IV. THE BEAN-FIELD.

MEANWHILE my beans, the length of whose rows, added together, was seven miles already planted, were impatient to be hoed, for the earliest had grown considerably before the latest were in the ground ; indeed, they were not easily to be put off. What was the meaning of this so steady and self-respecting, this small Herculean labour, I knew not. I came to love my rows, my beans, though so many more than I wanted. They attached me to the earth, and so I got strength like Antæus.

10 But why should I raise them ? Only Heaven knows. This was my curious labour all summer,—to make this portion of the earth's surface, which had yielded only cinquefoil, blackberries, johnswort, and the like, before, sweet wild fruits and pleasant flowers, produce instead this pulse. What shall I learn of beans or beans of me ? I cherish them, I hoe them, early and late I have an eye to them ; and this is my day's work. It is a fine broad leaf to look on. My auxiliaries are the dews and rains which water this dry soil, and what fertility is in the soil

20 itself, which for the most part is lean and effete. My enemies are worms, cool days, and most of all woodchucks. The last have nibbled for me a quarter of an acre clean. But what right had I to oust johnswort and the rest, and break up their ancient herb garden ?

Soon, however, the remaining beans will be too tough for them, and go forward to meet new foes.

When I was four years old, as I well remember, I was brought from Boston to this my native town, through these very woods and this field, to the pond. It is one of the oldest scenes stamped on my memory. And now to-night my flute has waked the echoes over that very water. The pines still stand here, older than I; or, if some have fallen, I have cooked my supper with their stumps, and a new growth is rising all around, preparing 10 another aspect for new infant eyes. Almost the same johnswort springs from the same perennial root in this pasture, and even I have at length helped to clothe that fabulous landscape of my infant dreams, and one of the results of my presence and influence is seen in these bean leaves, corn blades, and potato vines.

I planted about two acres and a-half of upland; and as it was only about fifteen years since the land was cleared, and I myself had got out two or three cords of stumps, I did not give it any manure; but in the 20 course of the summer it appeared by the arrow-heads which I turned up in hoeing, that an extinct nation had anciently dwelt here and planted corn and beans ere white men came to clear the land, and so, to some extent, had exhausted the soil for this very crop.

Before yet any woodchuck or squirrel had run across the road, or the sun had got above the shrub oaks, while all the dew was on, though the farmers warned me against it,—I would advise you to do all your work if possible while the dew is on,—I began to level the 30 ranks of haughty weeds in my bean-field and throw dust upon their heads. Early in the morning I worked

barefooted, dabbling like a plastic artist in the dewy and crumbling sand, but later in the day the sun blistered my feet. There the sun lighted me to hoe beans, pacing slowly backward and forward over that yellow gravelly upland, between the long green rows, fifteen rods, the one end terminating in a shrub oak copse where I could rest in the shade, the other in a blackberry field where the green berries deepened their tints by the time I had made another bout. Removing the weeds, putting fresh  
10 soil about the bean stems, and encouraging this weed which I had sown, making the yellow soil express its summer thought in bean leaves and blossoms rather than in wormwood and piper and millet grass, making the earth say beans instead of grass,—this was my daily work. As I had little aid from horses or cattle, or hired men or boys, or improved implements of husbandry, I was much slower, and became much more intimate with my beans than usual. But labour of the hands, even when pursued to the verge of drudgery, is perhaps  
20 never the worst form of idleness. It has a constant and imperishable moral, and to the scholar it yields a classic result. A very *agricola laboriosus* was I to travellers bound westward through Lincoln and Wayland to nobody knows where; they sitting at their ease in gigs, with elbows on knees, and reins loosely hanging in festoons; I the home-staying, laborious native of the soil. But soon my homestead was out of their sight and thought. It was the only open and cultivated field for a great distance on either side of the road, so they made  
30 the most of it; and sometimes the man in the field heard more of travellers' gossip and comment than was meant for his ear: "Beans so late! peas so late!"

—for I continued to plant when others had begun to hoe,—the ministerial husbandman had not suspected it. “Corn, my boy, for fodder; corn for fodder.” “Does he *live* there?” asks the black bonnet of the grey coat, and the hard-featured farmer reins up his grateful dobbin to inquire what you are doing when he sees no manure in the furrow, and recommends a little chip dirt, or any little waste stuff, or it may be ashes or plaster. But here were two acres and a-half of furrows, and only a hoe for cart and two hands to draw it,—10 there being an aversion to other carts and horses,—and chip dirt far away. Fellow-travellers as they rattled by compared it aloud with the fields which they had passed, so that I came to know how I stood in the agricultural world. This was one field not in Mr. Coleman’s report. And, by the way, who estimates the value of the crop which Nature yields in the still wilder fields unimproved by man? The crop of *English* hay is carefully weighed, the moisture calculated, the silicates and the potash; but in all dells and pond holes 20 in the woods and pastures and swamps grows a rich and various crop only unreaped by man. Mine was, as it were, the connecting link between wild and cultivated fields; as some states are civilised, and others half-civilised, and others savage or barbarous, so my field was, though not in a bad sense, a half-cultivated field. They were beans cheerfully returning to their wild and primitive state that I cultivated, and my hoe played the *Rans des Vaches* for them.

Near at hand, upon the topmost spray of a birch, 30 sings the brown-thrasher—or red mavis, as some love to call him—all the morning, glad of your society, that

would find out another farmer's field if yours were not here. While you are planting the seed, he cries,—“Drop it, drop it,—cover it up, cover it up,—pull it up, pull it up, pull it up.” But this was not corn, and so it was safe from such enemies as he. You may wonder what his rigmarole, his amateur Paganini performances on one string or on twenty, have to do with your planting, and yet prefer it to leached ashes or plaster. It was a cheap sort of top-dressing in which I  
10 had entire faith.

As I drew a still fresher soil about the rows with my hoe, I disturbed the ashes of unchronicled nations who in primeval years lived under these heavens, and their small implements of war and hunting were brought to the light of this modern day. They lay mingled with other natural stones, some of which bore the marks of having been burned by Indian fires, and some by the sun, and also bits of pottery and glass brought hither by the recent cultivators of the soil. When my hoe  
20 tinkled against the stones, that music echoed to the woods and the sky, and was an accompaniment to my labour which yielded an instant and immeasurable crop. It was no longer beans that I hoed nor I that hoed beans; and I remembered with as much pity as pride, if I remembered at all, my acquaintances who had gone to the city to attend the oratorios. The night-hawk circled overhead in the sunny afternoons—for I sometimes made a day of it—like a mote in the eye, or in heaven's eye, falling from time to time with  
30 a swoop and a sound as if the heavens were rent, torn at last to very rags and tatters, and yet a seamless cope remained; small imps that fill the air and lay their

eggs on the ground on bare sand or rocks on the tops of hills, where few have found them; graceful and slender like ripples caught up from the pond, as leaves are raised by the wind to float in the heavens; such kindredship is in Nature. The hawk is aerial brother of the wave which he sails over and surveys, those his perfect air-inflated wings answering to the elemental unfledged pinions of the sea. Or sometimes I watched a pair of hen-hawks circling high in the sky, alternately soaring and descending, approaching and leaving one 10 another, as if they were the embodiment of my own thoughts. Or I was attracted by the passage of wild pigeons from this wood to that, with a slight quivering winnowing sound and carrier haste; or from under a rotten stump my hoe turned up a sluggish, portentous, and outlandish salamander, a trace of Egypt and the Nile, yet our contemporary. When I paused to lean on my hoe, these sounds and sights I heard and saw anywhere in the row, a part of the inexhaustible entertainment which the country offers. 20

On gala days the town fires its great guns, which echo like pop-guns to these woods, and some waifs of martial music occasionally penetrate thus far. To me, away there in my bean-field at the other end of the town, the big guns sounded as if a puff-ball had burst; and when there was a military turn-out of which I was ignorant, I have sometimes had a vague sense all the day of some sort of itching and disease in the horizon, as if some eruption would break out there soon—either scarlatina or canker-rash—until at length some more 30 favourable puff of wind, making haste over the fields and up the Wayland road, brought me information of

the "trainers." It seemed by the distant hum as if somebody's bees had swarmed, and that the neighbours, according to Virgil's advice, by a faint *tintinnabulum* upon the most sonorous of their domestic utensils, were endeavouring to call them down into the hive again. And when the sound died quite away, and the hum had ceased, and the most favourable breezes told no tale, I knew that they had got the last drone of them all safely into the Middlesex hive, and that now  
10 their minds were bent on the honey with which it was smeared.

I felt proud to know that the liberties of Massachusetts and of our fatherland were in such safe keeping; and as I turned to my hoeing again I was filled with an inexpressible confidence, and pursued my labour cheerfully, with a calm trust in the future.

When there were several bands of musicians, it sounded as if all the village was a vast bellows, and all the buildings expanded and collapsed alternately with a  
20 din. But sometimes it was a really noble and inspiring strain that reached these woods, and the trumpet that sings of fame, and I felt as if I could spit a Mexican with a good relish,—for why should we always stand for trifles?—and looked round for a woodchuck or a skunk to exercise my chivalry upon. These martial strains seemed as far away as Palestine, and reminded me of a march of crusaders in the horizon, with a slight tantivy and tremulous motion of the elm-tree tops which overhang the village. This was one of the *great* days;  
30 though the sky had from my clearing only the same everlasting great look that it wears daily.

It was a singular experience that long acquaintance

which I cultivated with beans, what with planting and hoeing, and harvesting, and threshing, and picking over, and selling them,—the last was the hardest of all,—I might add eating, for I did taste. I was determined to know beans. When they were growing, I used to hoe from five o'clock in the morning till noon, and commonly spent the rest of the day about other affairs. Consider the intimate and curious acquaintance one makes with various kinds of weeds,—it will bear some iteration in the account, for there is no little iteration in 10 the labour,—disturbing their delicate organisations so ruthlessly, and making such invidious distinctions with his hoe, levelling whole ranks of one species, and sedulously cultivating another. That's Roman wormwood,—that's pigweed,—that's sorrel,—that's piper-grass,—have at him, chop him up, turn his roots upward to the sun, don't let him have a fibre in the shade ; if you do, he'll turn himself t'other side up and be as green as a leek in two days. A long war, not with cranes, but with weeds, those Trojans who had sun, and rain, and 20 dews on their side. Daily the beans saw me come to their rescue armed with a hoe, and thin the ranks of their enemies, filling up the trenches with weedy dead. Many a lusty crest-waving Hector, that towered a whole foot above his crowding comrades, fell before my weapon.

This is the result of my experience in raising beans. Plant the common small white bush bean about the first of June, in rows three feet by eighteen inches apart, being careful to select fresh, round, and unmixed seed. 30 First look out for worms, and supply vacancies by planting anew. Then look out for woodchucks, if it is an

exposed place, for they will nibble off the earliest tender leaves almost clean as they go ; and again, when the young tendrils make their appearance, they have notice of it, and will shear them off with both buds and young pods, sitting erect like a squirrel. But above all harvest as early as possible, if you would escape frosts and have a fair and saleable crop ; you may save much loss by this means.

This further experience also I gained. I said to myself, I will not plant beans and corn with so much industry  
10 another summer, but such seeds, if the seed is not lost, as sincerity, truth, simplicity, faith, innocence, and the like, and see if they will not grow in this soil, even with less toil and manurance, and sustain me, for surely it has not been exhausted for these crops. Alas ! I said this to myself ; but now another summer is gone, and another, and another, and I am obliged to say to you, reader, that the seeds which I planted, if indeed they  
20 *were* the seeds of those virtues, were worm-eaten or had lost their vitality, and so did not come up.

## V. THE VILLAGE.

AFTER hoeing, or perhaps reading and writing, in the forenoon, I usually bathed again in the pond, swimming across one of its coves for a stint, and washed the dust of labour from my person, or smoothed out the last wrinkle which study had made, and for the afternoon was absolutely free. Every day or two I strolled to the village to hear some of the gossip which is incessantly going on there, circulating either from mouth to mouth, or from newspaper to newspaper, and which, taken in homœopathic doses, was really as refreshing in its way as the rustle of leaves and the peeping of frogs. As I walked in the woods to see the birds and squirrels, so I walked in the village to see the men and boys; instead of the wind among the pines I heard the carts rattle. In one direction from my house there was a colony of musk-rats in the river meadows; under the grove of elms and buttonwoods in the other horizon was a village of busy men, as curious to me as if they had been prairie dogs, each sitting at the mouth of its burrow, or running over to a neighbour's to gossip. I went there frequently to observe their habits. The village appeared to me a great news-room; and on one side, to support it, as once at Redding & Company's on State Street, they kept nuts and raisins, or salt and

meal, and other groceries. Some have such a vast appetite for the former commodity—that is, the news—and such sound digestive organs, that they can sit for ever in public avenues without stirring, and let it simmer and whisper through them like the Etesian winds, or as if inhaling ether, it only producing numbness and insensibility to pain,—otherwise it would often be painful to hear,—without affecting the consciousness. I hardly ever failed, when I rambled through the village,  
10 to see a row of such worthies, either sitting on a ladder sunning themselves, with their bodies inclined forward and their eyes glancing along the line this way and that, from time to time, with a voluptuous expression, or else leaning against a barn with their hands in their pockets, like caryatides, as if to prop it up. They, being commonly out of doors, heard whatever was in the wind. These are the coarsest mills, in which all gossip is first rudely digested or cracked up before it is emptied into finer and more delicate hoppers within doors. I ob-  
20 served that the vitals of the village were the grocery, the bar-room, the post office, and the bank; and, as a necessary part of the machinery, they kept a bell, a big gun, and a fire-engine, at convenient places; and the houses were so arranged as to make the most of mankind, in lanes and fronting one another, so that every traveller had to run the gauntlet, and every man, woman, and child might get a lick at him. Of course, those who were stationed nearest to the head of the line, where they could most see and be seen, and have the  
30 first blow at him, paid the highest prices for their place; and the few straggling inhabitants in the outskirts, where long gaps in the line began to occur, and the

traveller could get over walls or turn aside into cow-paths, and so escape, paid a very slight ground or window tax. Signs were hung out on all sides to allure him ; some to catch him by the appetite, as the tavern and victualling cellar ; some by the fancy, as the dry goods store and the jeweller's ; and others by the hair, or the feet, or the skirts, as the barber, the shoemaker, or the tailor. Besides, there was a still more terrible standing invitation to call at every one of these houses, and company expected about these times. For the most 10 part I escaped wonderfully from these dangers, either by proceeding at once boldly and without deliberation to the goal, as is recommended to those who run the gauntlet, or by keeping my thoughts on high things, like Orpheus, who, "loudly singing the praises of the gods to his lyre, drowned the voices of the Sirens, and kept out of danger." Sometimes I bolted suddenly, and nobody could tell my whereabouts, for I did not stand much about gracefulness, and never hesitated at a gap in a fence. I was even accustomed to make an 20 irruption into some houses, where I was well entertained, and after learning the kernels and very last sieveful of news, what had subsided, the prospects of war and peace, and whether the world was likely to hold together much longer, I was let out through the rear avenues, and so escaped to the woods again.

It was very pleasant, when I staid late in town, to launch myself into the night, especially if it was dark and tempestuous, and set sail from some bright village parlour or lecture room, with a bag of rye or Indian 30 meal upon my shoulder, for my snug harbour in the woods, having made all tight without and withdrawn

under hatches with a merry crew of thoughts, leaving only my outer man at the helm, or even tying up the helm when it was plain sailing. I had many a genial thought by the cabin fire "as I sailed." I was never cast away nor distressed in any weather, though I encountered some severe storms. It is darker in the woods, even in common nights, than most suppose. I frequently had to look up at the opening between the trees above the path in order to learn my route, 10 and, where there was no cart-path, to feel with my feet the faint track which I had worn, or steer by the known relation of particular trees which I felt with my hands, passing between two pines for instance, not more than eighteen inches apart, in the midst of the woods, invariably in the darkest night. Sometimes, after coming home thus late in a dark and muggy night, when my feet felt the path which my eyes could not see, dreaming and absent-minded all the way, until I was aroused by having to raise my hand to lift the latch, I have not been able 20 to recall a single step of my walk, and I have thought that perhaps my body would find its way home if its master should forsake it, as the hand finds its way to the mouth without assistance. Several times, when a visitor chanced to stay into evening, and it proved a dark night, I was obliged to conduct him to the cart-path in the rear of the house, and then point out to him the direction he was to pursue, and in keeping which he was to be guided rather by his feet than his eyes. One very dark night I directed thus on their way two young 30 men who had been fishing in the pond. They lived about a mile off through the woods, and were quite used to the route. A day or two after one of them told me that

they wandered about the greater part of the night, close by their own premises, and did not get home till toward morning, by which time, as there had been several heavy showers in the meanwhile, and the leaves were very wet, they were drenched to their skins. I have heard of many going astray even in the village streets, when the darkness was so thick that you could cut it with a knife, as the saying is. Some who live in the outskirts, having come to town a-shopping in their waggons, have been obliged to put up for the night; and ladies and 10 gentlemen making a call, have gone half a mile out of their way, feeling the side-walk only with their feet, and not knowing when they turned. It is a surprising and memorable, as well as valuable experience, to be lost in the woods at any time. Often in a snow-storm, even by day, one will come out upon a well-known road and yet find it impossible to tell which way leads to the village. Though he knows that he has travelled it a thousand times, he cannot recognise a feature in it, but it is as strange to him as if it were a road in Siberia. 20 By night, of course, the perplexity is infinitely greater. In our most trivial walks we are constantly, though unconsciously, steering like pilots by certain well-known beacons and headlands, and if we go beyond our usual course we still carry in our minds the bearing of some neighbouring cape; and not till we are completely lost, or turned round,—for a man needs only to be turned round once with his eyes shut in this world to be lost,—do we appreciate the vastness and strangeness of Nature. Every man has to learn the points of compass again 30 as often as he awakes, whether from sleep or any abstraction. Not till we are lost—in other words, not

till we have lost the world—do we begin to find ourselves, and realise where we are, and the infinite extent of our relations.

One afternoon, near the end of the first summer, when I went to the village to get a shoe from the cobbler's, I was seized and put into jail, because, as I have elsewhere related, I did not pay a tax to, or recognise the authority of, the state which buys and sells men, women, and children, like cattle at the door of its senate-house.

10 I had gone down the woods for other purposes. But, wherever a man goes, men will pursue and paw him with their dirty institutions, and, if they can, constrain him to belong to their desperate odd-fellow society. It is true, I might have resisted forcibly with more or less effect, might have run "amok" against society; but I preferred that society should run "amok" against me, it being the desperate party. However, I was released the next day, obtained my mended shoe, and returned to the woods in season to get my dinner of huckleberries

20 on Fair-Haven Hill. I was never molested by any person but those who represented the state. I had no lock nor bolt but for the desk which held my papers, not even a nail to put over my latch or windows. I never fastened my door night or day, though I was to be absent several days; not even when the next fall I spent a fortnight in the woods of Maine. And yet my house was more respected than if it had been surrounded by a file of soldiers. The tired Rambler could rest and warm himself by my fire, the literary amuse himself with

30 the few books on my table, or the curious, by opening my closet door, see what was left of my dinner, and what prospect I had of a supper. Yet, though many people

of every class came this way to the pond, I suffered no serious inconvenience from these sources, and I never missed anything but one small book, a volume of Homer, which perhaps was improperly gilded, and this I trust a soldier of our camp has found by this time. I am convinced, that if all men were to live as simply as I then did, thieving and robbery would be unknown. These take place only in communities where some have got more than is sufficient, while others have not enough. The Pope's Homers would soon get properly 10 distributed—

“Nec bella fuerunt,  
Faginus astabat dum scyphus ante dapes.”

“Nor wars did men molest,  
When only beechen bowls were in request.”

“You who govern public affairs, what need have you to employ punishments? Love virtue, and the people will be virtuous. The virtues of a superior man are like the wind; the virtues of a common man are like the grass; the grass, when the wind passes over it, 20 bends.”

## VI. THE PONDS.

SOMETIMES, having had a surfeit of human society and gossip, and worn out all my village friends, I rambled still farther westward than I habitually dwell, into yet more unfrequented parts of the town, "to fresh woods and pastures new," or, while the sun was setting, made my supper of huckleberries and blueberries on Fair-Haven Hill, and laid up a store for several days. The fruits do not yield their true flavour to the purchaser of them, nor to him who raises them for the market.

10 There is but one way to obtain it, yet few take that way. If you would know the flavour of huckleberries, ask the cow-boy or the partridge. It is a vulgar error to suppose that you have tasted huckleberries who never plucked them. A huckleberry never reaches Boston; they have not been known there since they grew on her three hills. The ambrosial and essential part of the fruit is lost with the bloom which is rubbed off in the market-cart, and they become mere provender. As long as Eternal Justice reigns, not one

20 innocent huckleberry can be transported thither from the country's hills.

Occasionally, after my hoeing was done for the day, I joined some impatient companion who had been fishing on the pond since morning, as silent and motion-

less as a duck or a floating leaf, and, after practising various kinds of philosophy, had concluded commonly, by the time I arrived, that he belonged to the ancient sect of Coenobites. There was one older man, an excellent fisher and skilled in all kinds of woodcraft, who was pleased to look upon my house as a building erected for the convenience of fishermen : and I was equally pleased when he sat in my doorway to arrange his lines. Once in a while we sat together on the pond, he at one end of the boat and I at the other ; but not many words passed 10 between us, for he had grown deaf in his later years, but he occasionally hummed a psalm, which harmonised well enough with my philosophy. Our intercourse was thus altogether one of unbroken harmony, far more pleasing to remember than if it had been carried on by speech. When, as was commonly the case, I had none to commune with, I used to raise the echoes by striking with a paddle on the side of my boat, filling the surrounding woods with circling and dilating sound, stirring them up as the keeper of a menagerie his wild beasts, 20 until I elicited a growl from every wooded vale and hillside.

In warm evenings I frequently sat in the boat playing the flute, and saw the perch, which I seemed to have charmed, hovering around me, and the moon travelling over the ribbed bottom, which was strewn with the wrecks of the forest. Formerly I had come to this pond adventurously, from time to time, in dark summer nights, with a companion, and making a fire close to the water's edge, which we thought attracted 30 the fishes, we caught pouts with a bunch of worms strung on a thread, and when we had done, far in the

night, threw the burning brands high into the air like sky-rockets, which, coming down into the pond, were quenched with a loud hissing, and we were suddenly groping in total darkness. Through this, whistling a tune, we took our way to the haunts of men again. But now I had made my home by the shore.

Sometimes, after staying in a village parlour till the family had all retired, I have returned to the woods, and, partly with a view to the next day's dinner, spent  
10 the hours of midnight fishing from a boat by moonlight, serenaded by owls and foxes, and hearing, from time to time, the creaking note of some unknown bird close at hand. These experiences were very memorable and valuable to me,—anchored in forty feet of water, and twenty or thirty rods from the shore, surrounded sometimes by thousands of small perch and shiners, dimpling the surface with their tails in the moonlight, and communicating by a long flaxen line with mysterious nocturnal fishes which had their dwell-  
20 ing forty feet below, or sometimes dragging sixty feet of line about the pond as I drifted in the gentle night breeze, now and then feeling a slight vibration along it, indicative of some life prowling about its extremity of dull uncertain blundering purpose there, and slow to make up its mind. At length you slowly raise, pulling hand over hand, some horned pout squeaking and squirming to the upper air. It was very queer, especially in dark nights, when your thoughts had wandered to vast and cosmogonical themes in other spheres, to feel  
30 this faint jerk, which came to interrupt your dreams and link you to Nature again. It seemed as if I might next cast my line upward into the air, as well as downward

into this element which was scarcely more dense. Thus I caught two fishes, as it were, with one hook.

The scenery of Walden is on a humble scale, and, though very beautiful, does not approach to grandeur, nor can it much concern one who has not long frequented it or lived by its shore; yet this pond is so remarkable for its depth and purity as to merit a particular description. It is a clear and deep green well, half a mile long and a mile and three-quarters in circumference, and contains about sixty-one and a-half acres; 10 a perennial spring in the midst of pine and oak woods, without any visible inlet or outlet except by the clouds and evaporation. The surrounding hills rise abruptly from the water to the height of forty to eighty feet, though on the south-east and east they attain to about one hundred and one hundred and fifty feet respectively, within a quarter and a third of a mile. They are exclusively woodland. All our Concord waters have two colours at least, one when viewed at a distance, and another, more proper, close at hand. The first depends 20 more on the light, and follows the sky. In clear weather, in summer, they appear blue at a little distance, especially if agitated, and at a great distance all appear alike. In stormy weather they are sometimes of a dark slate colour. The sea, however, is said to be blue one day and green another without any perceptible change in the atmosphere. I have seen our river, when, the landscape being covered with snow, both water and ice were almost as green as grass. Some consider blue "to be the colour of pure water," whether liquid or 30 solid." But, looking directly down into our waters from

a boat, they are seen to be of very different colours. Walden is blue at one time and green at another, even from the same point of view. Lying between the earth and the heavens, it partakes of the colour of both. Viewed from a hill-top it reflects the colour of the sky, but near at hand it is of a yellowish tint next the shore where you can see the sand, then a light green, which gradually deepens to a uniform dark green in the body of the pond. In some lights, viewed even from a hill-top, 10 it is of a vivid green next the shore. Some have referred this to the reflection of the verdure ; but it is equally green there against the railroad sand-bank, and in the spring, before the leaves are expanded, and it may be simply the result of the prevailing blue mixed with the yellow of the sand. Such is the colour of its iris. This is that portion, also, where in the spring, the ice being warmed by the heat of the sun reflected from the bottom, and also transmitted through the earth, melts first and forms a narrow canal about the still frozen 20 middle. Like the rest of our waters, when much agitated, in clear weather, so that the surface of the waves may reflect the sky at the right angle, or because there is more light mixed with it, it appears at a little distance of a darker blue than the sky itself ; and at such a time, being on its surface, and looking with divided vision, so as to see the reflection, I have discerned a matchless and indescribable light blue, such as watered or changeable silks and sword blades suggest, more cerulean than the sky itself, alternating 30 with the original dark green on the opposite sides of the waves, which last appeared but muddy in comparison. It is a vitreous greenish blue, as I remember

it, like those patches of the winter sky seen through cloud vistas in the west before sundown. Yet a single glass of its water held up to the light is as colourless as an equal quantity of air. It is well known that a large plate of glass will have a green tint, owing, as the makers say, to its "body," but a small piece of the same will be colourless. How large a body of Walden water would be required to reflect a green tint I have never proved. The water of our river is black or a very dark brown to one looking directly down on it, 10 and, like that of most ponds, imparts to the body of one bathing in it a yellowish tinge; but this water is of such crystalline purity that the body of the bather appears of an alabaster whiteness, still more unnatural, which, as the limbs are magnified and distorted withal, produces a monstrous effect, making fit studies for a Michael Angelo.

The water is so transparent that the bottom can easily be discerned at the depth of twenty-five or thirty feet. Paddling over it, you may see many feet beneath the surface the schools of perch and shiners, perhaps only an inch long, yet the former easily distinguished by their transverse bars, and you think that they must be ascetic fish that find a subsistence there. Once, in the winter, many years ago, when I had been cutting holes through the ice in order to catch pickerel, as I stepped ashore I tossed my axe back on to the ice, but, as if some evil genius had directed it, it slid four or five rods directly into one of the holes, where the water was twenty-five feet deep. Out of curiosity, I 30 lay down on the ice and looked through the hole, until I saw the axe a little on one side, standing on its head,

with its helve erect and gently swaying to and fro with the pulse of the pond ; and there it might have stood erect and swaying till in the course of time the handle rotted off, if I had not disturbed it. Making another hole directly over it with an ice chisel which I had, and cutting down the longest birch which I could find in the neighbourhood with my knife, I made a slip noose, which I attached to its end, and, letting it down carefully, passed it over the knob of the handle, and drew it by a  
10 line along the birch, and so pulled the axe out again.

The shore is composed of a belt of smooth rounded white stones like paving stones, excepting one or two short sand beaches, and is so steep that in many places a single leap will carry you into the water over your head ; and were it not for its remarkable transparency, that would be the last to be seen of its bottom till it rose on the opposite side. Some think it is bottomless. It is nowhere muddy, and a casual observer would say that there were no weeds at all in it ; and of notice-  
20 able plants, except in the little meadows recently overflowed, which do not properly belong to it, a closer scrutiny does not detect a flag nor a bulrush, nor even a lily, yellow or white, but only a few small heart-leaves and potamogetons, and perhaps a water-target or two ; all which, however, a bather might not perceive ; and these plants are clean and bright like the element they grow in. The stones extend a rod or two into the water, and then the bottom is pure sand, except in the deepest parts, where there is usually a little sediment, probably  
30 from the decay of the leaves which have been wafted on to it so many successive falls ; and a bright green weed is brought up on anchors even in midwinter.

The shore is irregular enough not to be monotonous I have in my mind's eye the western indented with deep bays, the bolder northern, and the beautifully-scolloped southern shore, where successive capes overlap each other, and suggest unexplored coves between. The forest has never so good a setting, nor is so distinctly beautiful, as when seen from the middle of a small lake amid hills which rise from the water's edge; for the water in which it is reflected not only makes the best foreground in such a case, but, with its winding shore, 10 the most natural and agreeable boundary to it. There is no rawness nor imperfection in its edge there, as where the axe has cleared a part, or a cultivated field abuts on it. The trees have ample room to expand on the water-side, and each sends forth its most vigorous branch in that direction. There Nature has woven a natural selva, and the eye rises by just gradations from the low shrubs of the shore to the highest trees. There are few traces of man's hand to be seen. The water laves the shore as it did a thousand years ago. 20

A lake is the landscape's most beautiful and expressive feature. It is earth's eye, looking into which the beholder measures the depth of his own nature. The fluviatile trees next the shore are the slender eyelashes which fringe it, and the wooded hills and cliffs around are its overhanging brows.

Standing on the smooth sandy beach at the east end of the pond, in a calm September afternoon, when a slight haze makes the opposite shore-line indistinct, I have seen whence came the expression, "the glassy 30 surface of a lake." When you invert your head, it looks like a thread of finest gossamer stretched across

the valley, and gleaming against the distant pine woods, separating one stratum of the atmosphere from another. You would think that you could walk dry under it to the opposite hills, and that the swallows which skim over might perch on it. Indeed, they sometimes dive below the line, as it were by mistake, and are undeceived. As you look over the pond westward you are obliged to employ both your hands to defend your eyes against the reflected as well as the true sun, for they  
10 are equally bright ; and if, between the two, you survey its surface critically, it is literally as smooth as glass, except where the skater insects, at equal intervals scattered over its whole extent, by their motions in the sun produce the finest imaginable sparkle on it, or, perchance, a duck plumes itself, or, as I have said, a swallow skims so low as to touch it. It may be that in the distance a fish describes an arc of three or four feet in the air, and there is one bright flash where it emerges, and another where it strikes the water ;  
20 sometimes the whole silvery arc is revealed ; or here and there, perhaps, is a thistle-down floating on its surface, which the fishes dart at and so dimple it again. It is like molten glass cooled but not congealed, and the few motes in it are pure and beautiful, like the imperfections in glass. You may often detect a yet smoother and darker water, separated from the rest as if by an invisible cobweb, boom of the water nymphs, resting on it. From a hill-top you can see a fish leap in almost any part ; for not a pickerel or shiner picks an insect  
30 from this smooth surface but it manifestly disturbs the equilibrium of the whole lake.

In such a day, in September or October, Walden is

a perfect forest mirror, set round with stones as precious to my eye as if fewer or rarer. Nothing so fair, so pure, and at the same time so large, as a lake, perchance, lies on the surface of the earth. Sky water. It needs no fence. Nations come and go without defiling it. It is a mirror which no stone can crack, whose quicksilver will never wear off, whose gilding Nature continually repairs; no storms, no dust, can dim its surface ever fresh;—a mirror in which all impurity presented to it sinks, swept and dusted by the sun's hazy brush—this 10 the light-dust-cloth—which retains no breath that is breathed on it, but sends its own to float as clouds high above its surface, and be reflected on its bosom still.

A field of water betrays the spirit that is in the air. It is continually receiving new life and motion from above. It is intermediate in its nature between land and sky. On land only the grass and trees wave, but the water itself is rippled by the wind. I see where the breeze dashes across it by the streaks or flakes of light. It is remarkable that we can look down on its surface of air 20 at length, and mark where a still subtler spirit sweeps over it.

The skaters and water-bugs finally disappear in the latter part of October, when the severe frosts have come; and then and in November, usually, in a calm day, there is absolutely nothing to ripple the surface. One November afternoon, in the calm at the end of a rain-storm of several days' duration, when the sky was still completely overcast and the air was full of mist, I observed that the pond was remarkably smooth, so that 30 it was difficult to distinguish its surface; though it no longer reflected the bright tints of October, but the

sombre November colours of the surrounding hills. Though I passed over it as gently as possible, the slight undulations produced by my boat extended almost as far as I could see, and gave a ribbed appearance to the reflections. But, as I was looking over the surface, I saw here and there at a distance a faint glimmer, as if some skater insects which had escaped the frosts might be collected there, or, perchance, the surface, being so smooth, betrayed where a spring welled up from the  
10 bottom. Paddling gently to one of these places, I was surprised to find myself surrounded by myriads of small perch, about five inches long, of a rich bronze colour in the green water, sporting there and constantly rising to the surface and dimpling it, sometimes leaving bubbles on it. In such transparent and seemingly bottomless water, reflecting the clouds, I seemed to be floating through the air as in a balloon, and their swimming impressed me as a kind of flight or hovering, as if they were a compact flock of birds passing just  
20 beneath my level on the right or left, their fins, like sails, set all around them. There were many such schools in the pond, apparently improving the short season before winter would draw an icy shutter over their broad skylight, sometimes giving to the surface an appearance as if a slight breeze struck it, or a few rain-drops fell there. When I approached carelessly and alarmed them, they made a sudden plash and rippling with their tails, as if one had struck the water with a brushy bough, and instantly took refuge in the depths. At length  
30 the wind rose, the mist increased, and the waves began to run, and the perch leaped much higher than before, half out of water, a hundred black points, three inches

long, at once above the surface. Even as late as the 5th of December, one year, I saw some dimples on the surface, and thinking it was going to rain hard immediately, the air being full of mist, I made haste to take my place at the oars and row homewards; already the rain seemed rapidly increasing, though I felt none on my cheek, and I anticipated a thorough soaking. But suddenly the dimples ceased, for they were produced by the perch, which the noise of my oars had scared into the depths, and I saw their schools dimly disappearing; 10 so I spent a dry afternoon after all.

When I first paddled a boat on Walden, it was completely surrounded by thick and lofty pine and oak woods, and in some of its coves grape vines had run over the trees next the water and formed bowers under which a boat could pass. The hills which form its shores are so steep, and the woods on them were then so high, that, as you looked down from the west end, it had the appearance of an amphitheatre for some kind of sylvan spectacle. I have spent many an hour, when 20 I was younger, floating over its surface as the zephyr willed, having paddled my boat to the middle, and lying on my back across the seats, in a summer forenoon, dreaming awake, until I was aroused by the boat touching the sand, and I arose to see what shore my fates had impelled me to—days when idleness was the most attractive and productive industry. Many a forenoon have I stolen away, preferring to spend thus the most valued part of the day; for I was rich, if not in money, in sunny hours and summer days, and spent 30 them lavishly; nor do I regret that I did not waste more of them in the workshop or the teacher's desk.

But since I left those shores the woodchoppers have still further laid them waste, and now for many a year there will be no more rambling through the aisles of the wood, with occasional vistas through which you see the water. My Muse may be excused if she is silent henceforth. How can you expect the birds to sing when their groves are cut down?

## VII. BRUTE NEIGHBOURS.

THE mice which haunted my house were not the common ones, which are said to have been introduced into the country, but a wild native kind not found in the village. I sent one to a distinguished naturalist, and it interested him much. When I was building, one of these had its nest underneath the house, and before I had laid the second floor, and swept out the shavings, would come out regularly at lunch time and pick up the crumbs at my feet. It probably had never seen a man before; and it soon became quite familiar, and would run over my shoes and up my clothes. It could readily ascend the sides of the room by short impulses, like a squirrel, which it resembled in its motions. At length, as I leaned with my elbow on the bench one day, it ran up my clothes, and along my sleeve, and round and round the paper which held my dinner, while I kept the latter close, and dodged and played at bo-peep with it; and when at last I held still a piece of cheese between my thumb and finger, it came and nibbled it, sitting in my hand, and afterward cleaned its face and paws, like a 20 fly, and walked away.

A phoebe soon built in my shed, and a robin for protection in a pine which grew against the house. In June the partridge (*Tetrao umbellus*), which is so shy a bird,

led her brood past my windows, from the woods in the rear to the front of my house, clucking and calling to them like a hen, and in all her behaviour proving herself the hen of the woods. The young suddenly disperse on your approach, at a signal from the mother, as if a whirlwind had swept them away, and they so exactly resemble the dried leaves and twigs that many a traveller has placed his foot in the midst of a brood, and heard the whirr of the old bird as she flew off, and her anxious  
10 calls and mewing, or seen her trail her wings to attract his attention, without suspecting their neighbourhood. The parent will sometimes roll and spin round before you in such a dishabille, that you cannot, for a few moments, detect what kind of a creature it is. The young squat still and flat, often running their heads under a leaf, and mind only their mother's directions given from a distance, nor will your approach make them run again and betray themselves. You may even tread on them, or have your eyes on them for a minute,  
20 without discovering them. I have held them in my open hand at such a time, and still their only care, obedient to their mother and their instinct, was to squat there without fear or trembling. So perfect is this instinct, that once, when I had laid them on the leaves again, and one accidentally fell on its side, it was found with the rest in exactly the same position ten minutes afterward. They are not callow like the young of most birds, but more perfectly developed and precocious even than chickens. The remarkably adult yet innocent  
30 expression of their open and serene eyes is very memorable. All intelligence seems reflected in them. They suggest not merely the purity of infancy, but a

wisdom clarified by experience. Such an eye was not born when the bird was, but is coeval with the sky it reflects. The woods do not yield another such a gem. The traveller does not often look into such a limpid well. The ignorant or reckless sportsman often shoots the parent at such a time, and leaves these innocents to fall a prey to some prowling beast or bird, or gradually mingle with the decaying leaves which they so much resemble. It is said that when hatched by a hen they will directly disperse on some alarm, and so are lost, 10 for they never hear the mother's call which gathers them again. These were my hens and chickens.

It is remarkable how many creatures live wild and free though secret in the woods, and still sustain themselves in the neighbourhood of towns, suspected by hunters only. How retired the otter manages to live here! He grows to be four feet long, as big as a small boy, perhaps without any human being getting a glimpse of him. I formerly saw the raccoon in the woods behind where my house is built, and probably still heard 20 their whinnering at night. Commonly I rested an hour or two in the shade at noon, after planting, and ate my lunch, and read a little by a spring which was the source of a swamp and of a brook, oozing from under Brister's Hill, half a mile from my field. The approach to this was through a succession of descending grassy hollows, full of young pitch-pines, into a larger wood about the swamp. There, in a very secluded and shaded spot, under a spreading white-pine, there was yet a clean firm sward to sit on. I had dug out the spring, and made a 30 well of clear grey water, where I could dip up a pailful without roiling it, and thither I went for this purpose

almost every day in midsummer, when the pond was warmest. Thither too the woodcock led her brood, to probe the mud for worms, flying but a foot above them down the bank, while they ran in a troop beneath ; but at last, spying me, she would leave her young and circle round and round me, nearer and nearer till within four or five feet, pretending broken wings and legs, to attract my attention, and get off her young, who would already have taken up their march, with faint wiry peep, single  
10 file through the swamp, as she directed. Or I heard the peep of the young when I could not see the parent bird. There too the turtle-doves sat over the spring, or fluttered from bough to bough of the soft white-pines over my head ; or the red squirrel, coursing down the nearest bough, was particularly familiar and inquisitive. You only need sit still long enough in some attractive spot in the woods that all its inhabitants may exhibit themselves to you by turns.

I was witness to events of a less peaceful character.  
20 One day when I went out to my wood-pile, or rather my pile of stumps, I observed two large ants, the one red, the other much larger, nearly half an inch long, and black, fiercely contending with one another. Having once got hold they never let go, but struggled and wrestled and rolled on the chips incessantly. Looking farther, I was surprised to find that the chips were covered with such combatants, that it was not a *duellum*, but a *bellum*, a war between two races of ants, the red always pitted against the black, and frequently two red  
30 ones to one black. The legions of these Myrmidons covered all the hills and vales in my woodyard, and the ground was already strewn with the dead and dying,

both red and black. It was the only battle which I have ever witnessed, the only battle-field I ever trod while the battle was raging ; internecine war ; the red republicans on the one hand, and the black imperialists on the other. On every side they were engaged in deadly combat, yet without any noise that I could hear, and human soldiers never fought so resolutely. I watched a couple that were fast locked in each other's embraces, in a little sunny valley amid the chips, now at noon-day prepared to fight till the sun went down, or 10 life went out. The smaller red champion had fastened himself like a vice to his adversary's front, and through all the tumblings on that field never for an instant ceased to gnaw at one of his feelers near the root, having already caused the other to go by the board ; while the stronger black one dashed him from side to side, and as I saw on looking nearer, had already divested him of several of his members. They fought with more pertinacity than bull-dogs. Neither manifested the least disposition to retreat. It was evident that their battle- 20 cry was Conquer or die. In the meanwhile there came along a single red ant on the hill-side of this valley, evidently full of excitement, who either had despatched his foe, or had not yet taken part in the battle ; probably the latter, for he had lost none of his limbs ; whose mother had charged him to return with his shield or upon it. Or perchance he was some Achilles, who had nourished his wrath apart, and had now come to avenge or rescue his Patroclus. He saw this unequal combat from afar—for the blacks were nearly twice the size of 30 the red—he drew near with rapid pace till he stood on his guard within half an inch of the combatants ; then,

watching his opportunity, he sprang upon the black warrior, and commenced his operations near the root of his right fore-leg, leaving the foe to select among his own members; and so there were three united for life, as if a new kind of attraction had been invented which put all other locks and cements to shame. I should not have wondered by this time to find that they had their respective musical bands stationed on some eminent chip, and playing their national airs the while, to excite the  
10 slow and cheer the dying combatants. I was myself excited somewhat even as if they had been men. The more you think of it, the less the difference. And certainly there is not a fight recorded in Concord history, at least, if in the history of America, that will bear a moment's comparison with this, whether for the numbers engaged in it, or for the patriotism and heroism displayed. For numbers and for carnage it was an Austerlitz or Dresden. Concord Fight! Two killed on the patriots' side, and Luther Blanchard wounded! Why  
20 here every ant was a Buttrick,—“ Fire! for God's sake, fire!”—and thousands shared the fate of Davis and Hosmer. There was not one hireling there. I have no doubt that it was a principle they fought for, as much as our ancestors, and not to avoid a threepenny tax on their tea; and the results of this battle will be as important and memorable to those whom it concerns as those of the battle of Bunker Hill, at least.

I took up the chip on which the three I have particularly described were struggling, carried it into my  
30 house, and placed it under a tumbler on my window-sill, in order to see the issue. Holding a microscope to the first-mentioned red ant, I saw that, though he was

assiduously gnawing at the near fore-leg of his enemy, having severed his remaining feeler, his own breast was all torn away, exposing what vitals he had there to the jaws of the black warrior, whose breast-plate was apparently too thick for him to pierce; and the dark carbuncles of the sufferer's eyes shone with ferocity such as war only could excite. They struggled half-an-hour longer under the tumbler, and when I looked again the black soldier had severed the heads of his foes from their bodies, and the still living heads were hanging on 10 either side of him like ghastly trophies at his saddle-bow, still apparently as firmly fastened as ever, and he was endeavouring with feeble struggles, being without feelers and with only the remnant of a leg, and I know not how many other wounds, to divest himself of them; which at length, after half-an-hour more, he accomplished. I raised the glass, and he went off over the window-sill in that crippled state. Whether he finally survived that combat, and spent the remainder of his days in some Hôtel des Invalides, I do not know; but I thought 20 that his industry would not be worth much thereafter. I never learned which party was victorious, nor the cause of the war: but I felt for the rest of that day as if I had had my feelings excited and harrowed by witnessing the struggle, the ferocity and carnage, of a human battle before my door.

Kirby and Spence tell us that the battles of ants have long been celebrated and the date of them recorded, though they say that Huber is the only modern author who appears to have witnessed them. "Æneas 30 Sylvius," say they, "after giving a very circumstantial account of one contested with great obstinacy by a

great and small species on the trunk of a pear tree," adds that, "'This action was fought in the pontificate of Eugenius the Fourth, in the presence of Nicholas Pistoriensis, an eminent lawyer, who related the whole history of the battle with the greatest fidelity.' A similar engagement between great and small ants is recorded by Olaus Magnus, in which the small ones, being victorious, are said to have buried the bodies of their own soldiers, but left those of their giant enemies  
10 a prey to the birds. This event happened previous to the expulsion of the tyrant Christiern the Second from Sweden." The battle which I witnessed took place in the Presidency of Polk, five years before the passage of Webster's Fugitive-Slave Bill.

Many a village Bose, fit only to course a mud-turtle in a victualling cellar, sported his heavy quarters in the woods, without the knowledge of his master, and ineffectually smelled at old fox burrows and wood-chucks' holes; led perchance by some slight cur which  
20 nimbly threaded the wood, and might still inspire a natural terror in its denizens;—now far behind his guide, barking like a canine bull toward some small squirrel which had treed itself for scrutiny, then, cantering off, bending the bushes with his weight, imagining that he is on the track of some stray member of the jerbilla family. Once I was surprised to see a cat walking along the stony shore of the pond, for they rarely wander so far from home. The surprise was mutual. Nevertheless the most domestic cat, which  
30 has lain on a rug all her days, appears quite at home in the woods, and, by her sly and stealthy behaviour, proves herself more native there than the regular

inhabitants. Once, when berrying, I met with a cat with young kittens in the woods, quite wild, and they all, like their mother, had their backs up and were fiercely spitting at me.

In the fall the loon (*Colymbus glacialis*) came, as usual, to moult and bathe in the pond, making the woods ring with his wild laughter before I had risen. At rumour of his arrival all the Mill-dam sportsmen are on the alert, in gigs and on foot, two by two and three by three, with patent rifles and conical balls and spy-<sup>10</sup>glasses. They come rustling through the woods like autumn leaves, at least ten men to one loon. Some station themselves on this side of the pond, some on that, for the poor bird cannot be omnipresent; if he dive here he must come up there. But now the kind October wind rises, rustling the leaves and rippling the surface of the water, so that no loon can be heard or seen, though his foes sweep the pond with spy-glasses, and make the woods resound with their discharges. The waves generously rise and dash angrily, taking <sup>20</sup>sides with all water-fowl, and our sportsmen must beat a retreat to town, and shop, and unfinished jobs. But they were too often successful. When I went to get a pail of water early in the morning I frequently saw this stately bird sailing out of my cove within a few rods. If I endeavoured to overtake him in a boat, in order to see how he would manœuvre, he would dive and be completely lost, so that I did not discover him again, sometimes, till the latter part of the day. But I was more than a match for him on the surface. He commonly <sup>30</sup>went off in a rain.

As I was paddling along the north shore one very

calm October afternoon, for such days especially they settle on to the lakes, like the milk-weed down, having looked in vain over the pond for a loon, suddenly one, sailing out from the shore toward the middle a few rods in front of me, set up his wild laugh and betrayed himself. I pursued with a paddle and he dived, but when he came up I was nearer than before. He dived again, but I miscalculated the direction he would take, and we were fifty rods apart when he came to the surface  
10 this time, for I had helped to widen the interval; and again he laughed loud and long, and with more reason than before. He manœuvred so cunningly that I could not get within half-a-dozen rods of him. Each time, when he came to the surface, turning his head this way and that, he coolly surveyed the water and the land, and apparently chose his course so that he might come up where there was the widest expanse of water and at the greatest distance from the boat. It was surprising how quickly he made up his mind and put his resolve  
20 into execution. He led me at once to the widest part of the pond, and could not be driven from it. While he was thinking one thing in his brain, I was endeavouring to divine his thought in mine. It was a pretty game, played on the smooth surface of the pond, a man against a loon. Suddenly your adversary's checker disappears beneath the board, and the problem is to place yours nearest to where his will appear again. Sometimes he would come up unexpectedly on the opposite side of me, having apparently passed directly  
30 under the boat. So long-winded was he and so unweariable, that when he had swum farthest he would immediately plunge again, nevertheless; and then no

wit could divine where in the deep pond, beneath the smooth surface, he might be speeding his way like a fish, for he had time and ability to visit the bottom of the pond in its deepest part. It is said that loons have been caught in the New York lakes eighty feet beneath the surface, with hooks set for trout,—though Walden is deeper than that. How surprised must the fishes be to see this ungainly visitor from another sphere speeding his way amid their schools! Yet he appeared to know his course as surely under water as on the surface, 10 and swam much faster there. Once or twice I saw a ripple where he approached the surface, just put his head out to reconnoitre, and instantly dived again. I found that it was as well for me to rest on my oars and wait his reappearing as to endeavour to calculate where he would rise; for again and again, when I was straining my eyes over the surface one way, I would suddenly be startled by his unearthly laugh behind me. But why, after displaying so much cunning, did he invariably betray himself the moment he came up by that loud 20 laugh? Did not his white breast enough betray him? He was indeed a silly loon, I thought. I could commonly hear the splash of the water when he came up, and so also detected him. But after an hour he seemed as fresh as ever, dived as willingly, and swam yet farther than at first. It was surprising to see how serenely he sailed off with unruffled breast when he came to the surface, doing all the work with his webbed feet beneath. His usual note was his demoniac laughter, yet somewhat like that of a water-fowl; but occasionally, when he 30 had balked me most successfully and come up a long way off, he muttered a long-drawn unearthly howl, probably

more like that of a wolf than any bird ; as when a beast puts his muzzle to the ground and deliberately howls. This was his looning,—perhaps the wildest sound that is ever heard here, making the woods ring far and wide. I concluded that he laughed in derision of my efforts, confident of his own resources. Though the sky was by this time overcast, the pond was so smooth that I could see where he broke the surface when I did not hear him. His white breast, the stillness of the air, and the smooth-  
10 ness of the water were all against him. At length, having come up fifty rods off, he uttered one of those prolonged howls, as if calling on the god of loons to aid him, and immediately there came a wind from the east and rippled the surface, and filled the whole air with misty rain, and I was impressed as if it were the prayer of the loon answered, and his god was angry with me, and so I left him disappearing far away on the tumultuous surface.

For hours, in fall days, I watched the ducks cunningly  
20 tack and veer and hold the middle of the pond, far from the sportsman—tricks which they will have less need to practise in Louisiana bayous. When compelled to rise they would sometimes circle round and round and over the pond at a considerable height, from which they could easily see to other ponds and the river, like black motes in the sky ; and, when I thought they had gone off thither long since, they would settle down by a slanting flight of a quarter of a mile on to a distant part which was left free ; but what beside safety they  
30 got by sailing in the middle of Walden I do not know, unless they love its water for the same reason that I do.

### VIII. HOUSE WARMING.

ALREADY, by the 1st of September, I had seen two or three small maples turned scarlet across the pond, beneath where the white stems of three aspens diverged, at the point of a promontory, next the water. Ah, many a tale their colour told ! And gradually from week to week the character of each tree came out, and it admired itself reflected in the smooth mirror of the lake. Each morning the manager of this gallery substituted some new picture, distinguished by more brilliant or harmonious colouring, for the old upon the walls. 10

The wasps came by thousands to my lodge in October, as to winter-quarters, and settled on my windows within and on the walls overhead, sometimes deterring visitors from entering. Each morning, when they were numbed with cold, I swept some of them out, but I did not trouble myself much to get rid of them ; I even felt complimented by their regarding my house as a desirable shelter. They never molested me seriously, though they bedded with me ; and they gradually disappeared, into what crevices I do not know, avoiding winter and 20 unspeakable cold.

Like the wasps, before I finally went into winter-quarters in November, I used to resort to the north-east side of Walden. which the sun, reflected from the pitch-

pine woods and the stony shore, made the fireside of the pond ; it is so much pleasanter and wholesomer to be warmed by the sun while you can be, than by an artificial fire. I thus warmed myself by the still glowing embers which the summer, like a departed hunter, had left.

When I came to build my chimney I studied masonry. My bricks being second-hand ones required to be cleaned with a trowel, so that I learned more than usual  
10 of the qualities of bricks and trowels. The mortar on them was fifty years old, and was said to be still growing harder ; but this is one of those sayings which men love to repeat whether they are true or not. Such sayings themselves grow harder and adhere more firmly with age, and it would take many blows with a trowel to clean an old wiseacre of them. Many of the villages of Mesopotamia are built of second-hand bricks of a very good quality, obtained from the ruins of Babylon, and the cement on them is older and probably harder still.  
20 However that may be, I was struck by the peculiar toughness of the steel which bore so many violent blows without being worn out. As my bricks had been in a chimney before, though I did not read the name of Nebuchadnezzar on them, I picked out as many fireplace bricks as I could find, to save work and waste, and I filled the spaces between the bricks about the fireplace with stones from the pond shore, and also made my mortar with the white sand from the same place. I lingered most about the fireplace, as the  
30 most vital part of the house. Indeed, I worked so deliberately, that though I commenced at the ground in the morning, a course of bricks raised a few inches

above the floor served for my pillow at night ; yet I did not get a stiff neck for it that I remember ; my stiff neck is of older date. I took a poet to board for a fortnight about those times, which caused me to be put to it for room. He brought his own knife, though I had two, and we used to scour them by thrusting them into the earth. He shared with me the labours of cooking. I was pleased to see my work rising so square and solid by degrees, and reflected, that, if it proceeded slowly, it was calculated to endure a long time. The chimney is 10 to some extent an independent structure, standing on the ground and rising through the house to the heavens ; even after the house is burned it still stands sometimes, and its importance and independence are apparent. This was toward the end of summer. It was now November.

The north wind had already begun to cool the pond, though it took many weeks of steady blowing to accomplish it, it is so deep. When I began to have a fire at 20 evening, before I plastered my house, the chimney carried smoke particularly well, because of the numerous chinks between the boards. Yet I passed some cheerful evenings in that cool and airy apartment, surrounded by the rough brown boards full of knots, and rafters with the bark on high overhead. My house never pleased my eye so much after it was plastered, though I was obliged to confess that it was more comfortable. Should not every apartment in which man dwells be lofty enough to create some obscurity overhead, where 30 flickering shadows may play at evening about the rafters ? These forms are more agreeable to the fancy

and imagination than fresco paintings or other the most expensive furniture. I now first began to inhabit my house, I may say, when I began to use it for warmth as well as shelter. I had a couple of old fire-dogs to keep the wood from the hearth, and it did me good to see the soot form on the back of the chimney which I had built, and I poked the fire with more right and more satisfaction than usual. My dwelling was small, and I could hardly entertain an echo in it; but it seemed  
10 larger for being a single apartment and remote from neighbours. All the attractions of a house were concentrated in one room; it was kitchen, chamber, parlour, and keeping-room; and whatever satisfaction parent or child, master or servant, derive from living in a house, I enjoyed it all. Cato says, the master of a family (*patremfamilias*) must have in his rustic villa "cellam oleariam, vinariam, dolia multa, uti lubeat caritatem expectare, et rei, et virtuti, et gloriæ erit,"—that is, "an oil and wine cellar, many casks, so that it  
20 may be pleasant to expect hard times; it will be for his advantage, and virtue, and glory." I had in my cellar a firkin of potatoes, about two quarts of peas with the weevil in them, and on my shelf a little rice, a jug of molasses, and of rye and Indian meal a peck each.

I sometimes dream of a larger and more populous house, standing in a golden age, of enduring materials, and without gingerbread work, which shall still consist of only one room, a vast, rude, substantial primitive hall,  
30 without ceiling or plastering, with bare rafters and purlins supporting a sort of lower heaven over one's head, —useful to keep off rain and snow; where the king and

queen posts stand out to receive your homage, when you have done reverence to the prostrate Saturn of an older dynasty on stepping over the sill ; a cavernous house, wherein you must reach up a torch upon a pole to see the roof ; where some may live in the fireplace, some in the recess of a window, and some on settles, some at one end of the hall, some at another, and some aloft on rafters with the spiders, if they choose ; a house which you have got into when you have opened the outside door, and the ceremony is over ; where the weary 10 traveller may wash, and eat, and converse, and sleep, without further journey ; such a shelter as you would be glad to reach in a tempestuous night, containing all the essentials of a house, and nothing for housekeeping ; where you can see all the treasures of the house at one view, and everything hangs upon its peg that a man should use ; at once kitchen, pantry, parlour, chamber, store-house, and garret ; where you can see so necessary a thing as a barrel or a ladder, so convenient a thing as a cupboard, and hear the pot boil, and pay your respects 20 to the fire that cooks your dinner and the oven that bakes your bread, and the necessary furniture and utensils are the chief ornaments ; where the washing is not put out, nor the fire, nor the mistress, and perhaps you are sometimes requested to move from off the trap-door, when the cook would descend into the cellar, and so learn whether the ground is solid or hollow beneath you without stamping. A house whose inside is as open and manifest as a bird's nest, and you cannot go in at the front door and out at the back without seeing some 30 of its inhabitants ; where to be a guest is to be presented with the freedom of the house, and not to be carefully

excluded from seven-eighths of it, shut up in a particular cell, and told to make yourself at home there,—in solitary confinement. Nowadays the host does not admit you to *his* hearth, but has got the mason to build one for yourself somewhere in his alley, and hospitality is the art of *keeping* you at the greatest distance. There is as much secrecy about the cooking as if he had a design to poison you. I am aware that I have been on many a man's premises, and might have been legally  
10 ordered off, but I am not aware that I have been in many men's houses. I might visit in my old clothes a king and queen who lived simply in such a house as I have described, if I were going their way ; but backing out of a modern palace will be all that I shall desire to learn, if ever I am caught in one.

I did not plaster till it was freezing weather. I brought over some whiter and cleaner sand for this purpose from the opposite shore of the pond in a boat, a sort of conveyance which would have tempted me to  
20 go much farther if necessary. My house had in the meanwhile been shingled down to the ground on every side. In lathing I was pleased to be able to send home each nail with a single blow of the hammer, and it was my ambition to transfer the plaster from the board to the wall neatly and rapidly. I remembered the story of a conceited fellow, who, in fine clothes, was wont to lounge about the village once, giving advice to workmen. Venturing one day to substitute deeds for words, he turned up his cuffs, seized the plasterer's board, and  
30 having loaded his trowel without mishap, with a complacent look toward the lathing overhead, made a bold gesture thitherward ; and straightway, to his complete

discomfiture, received the whole contents in his ruffled bosom. I admired anew the economy and convenience of plastering, which so effectually shuts out the cold and takes a handsome finish, and I learned the various casualties to which the plasterer is liable. I was surprised to see how thirsty the bricks were which drank up all the moisture in my plaster before I had smoothed it, and how many pailfuls of water it takes to christen a new hearth. I had the previous winter made a small quantity of lime by burning the shells of the *Unio* 10 *fluvialis*, which our river affords, for the sake of the experiment; so that I knew where my materials came from. I might have got good limestone within a mile or two and burned it myself, if I had cared to do so.

The pond had in the meanwhile skimmed over in the shadiest and shallowest coves, some days or even weeks before the general freezing. The first ice is especially interesting and perfect, being hard, dark, and transparent, and affords the best opportunity that ever offers for examining the bottom where it 20 is shallow; for you can lie at your length on ice only an inch thick, like a skater insect on the surface of the water, and study the bottom at your leisure, only two or three inches distant, like a picture behind a glass, and the water is necessarily always smooth then. There are many furrows in the sand where some creature has travelled about and doubled on its tracks; and, for wrecks, it is strewn with the cases of cadis worms made of minute grains of white quartz. Perhaps these have creased it, for you find some of their cases in the furrows, 30 though they are deep and broad for them to make. But

the ice itself is the object of most interest, though you must improve the earliest opportunity to study it. If you examine it closely the morning after it freezes, you find that the greater part of the bubbles, which at first appeared to be within it, are against its under surface, and that more are continually rising from the bottom; while the ice is as yet comparatively solid and dark, that is, you see the water through it. These bubbles are from an eightieth to an eighth of an inch in diameter, 10 very clear and beautiful, and you see your face reflected in them through the ice. There may be thirty or forty of them to a square inch. There are also already within the ice narrow, oblong, perpendicular bubbles about half an inch long, sharp cones with the apex upward; or oftener, if the ice is quite fresh, minute spherical bubbles, one directly above another, like a string of beads. But these within the ice are not so numerous nor obvious as those beneath. I sometimes used to cast on stones to try the strength of the ice, and those which broke 20 through carried in air with them, which formed very large and conspicuous white bubbles beneath. One day when I came to the same place forty-eight hours afterward, I found that those large bubbles were still perfect, though an inch more of ice had formed, as I could see distinctly by the seam in the edge of a cake. But as the last two days had been very warm, like an Indian summer, the ice was not now transparent, showing the dark green colour of the water, and the bottom, but opaque and whitish or grey, and though 30 twice as thick was hardly stronger than before, for the air bubbles had greatly expanded under this heat and run together, and lost their regularity; they were

no longer one directly over another, but often like silvery coins poured from a bag, one overlapping another, or in thin flakes, as if occupying slight cleavages. The beauty of the ice was gone, and it was too late to study the bottom. Being curious to know what position my great bubbles occupied with regard to the new ice, I broke out a cake containing a middling-sized one, and turned it bottom upward. The new ice had formed around and under the bubble, so that it was included between the two ices. It was wholly in the lower ice, 10 but close against the upper, and was flattish, or perhaps slightly lenticular, with a rounded edge, a quarter of an inch deep by four inches in diameter; and I was surprised to find that directly under the bubble the ice was melted with great regularity in the form of a saucer reversed, to the height of five-eighths of an inch in the middle, leaving a thin partition there between the water and the bubble, hardly an eighth of an inch thick; and in many places the small bubbles in this partition had burst out downward, and probably there was no 20 ice at all under the largest bubbles, which were a foot in diameter. I inferred that the infinite number of minute bubbles which I had first seen against the under surface of the ice were now frozen in likewise, and that each, in its degree, had operated like a burning glass on the ice beneath to melt and rot it. These are the little air-guns which contribute to make the ice crack and whoop.

At length the winter set in in good earnest, just as I had finished plastering, and the wind began to howl 30 around the house as if it had not had permission to

do so till then. Night after night the geese came lumbering in in the dark with a clangour and a whistling of wings, even after the ground was covered with snow, some to alight in Walden, and some flying low over the woods toward Fair-Haven, bound for Mexico. Several times, when returning from the village at ten or eleven o'clock at night, I heard the tread of a flock of geese or else ducks, on the dry leaves in the woods by a pond-hole behind my dwelling, where they had come up to  
10 feed, and the faint honk or quack of their leader as they hurried off. In 1845 Walden froze entirely over for the first time on the night of the 22nd of December, Flints' and other shallower ponds and the river having been frozen ten days or more; in '46, the 16th; in '49, about the 31st; and in '50, about the 27th of December; in '52, the 5th of January; in '53, the 31st of December. The snow had already covered the ground since the 25th of November, and surrounded me suddenly with the scenery of winter. I withdrew yet farther into my  
20 shell, and endeavoured to keep a bright fire both within my house and within my breast. My employment out of doors now was to collect the dead wood in the forest, bringing it in my hands or on my shoulders, or sometimes trailing a dead pine tree under each arm to my shed. An old forest fence which had seen its best days was a great haul for me. I sacrificed it to Vulcan, for it was past serving the god Terminus. How much more interesting an event is that man's supper who has just been forth in the snow to hunt, nay, you might say,  
30 steal, the fuel to cook it with! His bread and meat are sweet. There are enough faggots and waste wood of all kinds in the forests of most of our towns to support

many fires, but which at present warm none, and, some think, hinder the growth of the young wood. There was also the driftwood of the pond. In the course of the summer I had discovered a raft of pitch-pine logs with the bark on, pinned together by the Irish when the railroad was built. This I hauled up partly on the shore. After soaking two years and then lying high six months it was perfectly sound, though water-logged past drying. I amused myself one winter day with sliding this piecemeal across the pond, nearly half a 10 mile, skating behind with one end of a log fifteen feet long on my shoulder, and the other on the ice; or I tied several logs together with a birch withe, and then, with a longer birch or alder which had a hook at the end, dragged them across. Though completely waterlogged and almost as heavy as lead, they not only burned long, but made a very hot fire; nay, I thought that they burned better for the soaking, as if the pitch, being confined by the water, burned longer as in a lamp.

20

Every man looks at his wood-pile with a kind of affection. I loved to have mine before my window, and the more chips the better to remind me of my pleasing work. I had an old axe which nobody claimed, with which by spells in winter days, on the sunny side of the house, I played about the stumps which I had got out of my bean-field. As my driver prophesied when I was ploughing, they warmed me twice, once while I was splitting them, and again when they were on the fire, so that no fuel could give out more heat. 30 As for the axe, I was advised to get the village blacksmith to "jump" it; but I jumped him, and, putting

a hickory helve from the woods into it, made it do. If it was dull, it was at least hung true.

A few pieces of fat pine were a great treasure. It is interesting to remember how much of this food for fire is still concealed in the bowels of the earth. In previous years I had often gone "prospecting" over some bare hill-side, where a pitch-pine wood had formerly stood, and got out the fat pine roots. They are almost indestructible. Stumps thirty or forty years old, at  
10 least, will still be sound at the core, though the sap-wood has all become vegetable mould, as appears by the scales of the thick bark forming a ring level with the earth four or five inches distant from the heart. With axe and shovel you explore this mine, and follow the marrowy store, yellow as beef tallow, or as if you had struck on a vein of gold, deep into the earth. But commonly I kindled my fire with the dry leaves of the forest, which I had stored up in my shed before the snow came. Green hickory finely split makes the  
20 woodchopper's kindlings, when he has a camp in the woods. Once in a while I got a little of this. When the villagers were lighting their fires beyond the horizon, I too gave notice to the various wild inhabitants of Walden vale, by a smoky streamer from my chimney, that I was awake—

30 "Light-winged Smoke, Icarian bird,  
Melting thy pinions in thy upward flight,  
Lark without song, and messenger of dawn,  
Circling above the hamlets as thy nest ;  
Or else, departing dream, and shadowy form  
Of midnight vision, gathering up thy skirts ;  
By night star-veiling, and by day  
Darkening the light and blotting out the sun ;

Go thou my incense upward from this hearth,  
And ask the gods to pardon this clear flame."

Hard green wood just cut, though I used but little of that, answered my purpose better than any other. I sometimes left a good fire when I went to take a walk in a winter afternoon; and when I returned, three or four hours afterward, it would be still alive and glowing. My house was not empty though I was gone. It was as if I had left a cheerful housekeeper behind. It was I and Fire that lived there; and commonly my 10 housekeeper proved trustworthy. One day, however, as I was splitting wood, I thought that I would just look in at the window and see if the house was not on fire; it was the only time I remember to have been particularly anxious on this score; so I looked and saw that a spark had caught my bed, and I went in and extinguished it when it had burned a place as big as my hand. But my house occupied so sunny and sheltered a position, and its roof was so low, that I could afford to let the fire go out in the middle of 20 almost any winter day.

The moles nested in my cellar, nibbling every third potato, and making a snug bed even there of some hair left after plastering and of brown paper; for even the wildest animals love comfort and warmth as well as man, and they survive the winter only because they are so careful to secure them. Some of my friends spoke as if I was coming to the woods on purpose to freeze myself. The animal merely makes a bed, which he warms with his body in a sheltered place; but man, 30 having discovered fire, boxes up some air in a spacious apartment, and warms that, instead of robbing himself,

makes that his bed, in which he can move about divested of more cumbrous clothing, maintain a kind of summer in the midst of winter, and by means of windows even admit the light, and with a lamp lengthen out the day. Thus he goes a step or two beyond instinct, and saves a little time for the fine arts. Though, when I have been exposed to the rudest blasts a long time, my whole body began to grow torpid, when I reached the genial atmosphere of my house I soon recovered my faculties  
10 and prolonged my life. But the most luxuriously housed has little to boast of in this respect, nor need we trouble ourselves to speculate how the human race may be at last destroyed. It would be easy to cut their threads any time with a little sharper blast from the north. We go on dating from Cold Fridays and Great Snows; but a little colder Friday, or greater snow, would put a period to man's existence on the globe.

## IX. WINTER VISITORS.

I WEATHERED some merry snow-storms, and spent some cheerful winter evenings by my fireside, while the snow whirled wildly without, and even the hooting of the owl was hushed. For many weeks I met no one in my walks but those who came occasionally to cut wood and sled it to the village. The elements, however, abetted me in making a path through the deepest snow in the woods, for when I had once gone through the wind blew the oak leaves into my tracks, where they lodged, and by absorbing the rays of the sun 10 melted the snow, and so not only made a dry bed for my feet, but in the night their dark line was my guide.

At this season I seldom had a visitor. When the snow lay deepest no wanderer ventured near my house for a week or fortnight at a time, but there I lived as snug as a meadow mouse, or as cattle and poultry which are said to have survived for a long time buried in drifts, even without food ; or like that early settler's family in the town of Sutton, in this state, whose cottage was completely covered by the great snow of 20 1717 when he was absent, and an Indian found it only by the hole which the chimney's breath made in the drift, and so relieved the family. But no friendly Indian concerned himself about me ; nor needed he,

for the master of the house was at home. The Great Snow! How cheerful it is to hear of! When the farmers could not get to the woods and swamps with their teams, and were obliged to cut down the shade trees before their houses, and when the crust was harder cut off the trees in the swamps ten feet from the ground, as it appeared the next spring.

In the deepest snows, the path which I used from the highway to my house, about half a mile long, might  
10 have been represented by a meandering dotted line, with wide intervals between the dots. For a week of even weather I took exactly the same number of steps, and of the same length, coming and going, stepping deliberately and with the precision of a pair of dividers in my own deep tracks,—to such routine the winter reduces us,—yet often they were filled with heaven's own blue. But no weather interfered fatally with my walks, or rather my going abroad, for I frequently  
tramped eight or ten miles through the deepest snow  
20 to keep an appointment with a beech-tree, or a yellow-birch, or an old acquaintance among the pines; when the ice and snow causing their limbs to droop, and so sharpening their tops, had changed the pines into fir-trees; wading to the tops of the highest hills when the snow was nearly two feet deep on a level, and shaking down another snowstorm on my head at every step; or sometimes creeping and floundering thither on my hands and knees, when the hunters had gone into winter quarters. One afternoon I amused myself by  
30 watching a barred owl (*Strix nebulosa*) sitting on one of the lower dead limbs of a white-pine, close to the trunk, in broad daylight, I standing within a rod of

him. He could hear me when I moved and crunched the snow with my feet, but could not plainly see me. When I made most noise he would stretch out his neck, and erect his neck feathers, and open his eyes wide; but their lids soon fell again, and he began to nod. I too felt a slumberous influence after watching him half-an-hour, as he sat thus with his eyes half open, like a cat, winged brother of the cat. There was only a narrow slit left between their lids, by which he preserved a peninsular relation to me; thus, with half-shut 10 eyes, looking out from the land of dreams, and endeavouring to realise me, vague object or mote that interrupted his visions. At length, on some louder noise on my nearer approach, he would grow uneasy and sluggishly turn about on his perch, as if impatient at having his dreams disturbed; and when he launched himself off, and flapped through the pines, spreading his wings to unexpected breadth, I could not hear the slightest sound from them. Thus, guided amid the pine boughs rather by a delicate sense of their neigh- 20 bourhood than by sight, feeling his twilight way as it were with his sensitive pinions, he found a new perch, where he might in peace await the dawning of his day.

As I walked over the long causeway made for the railroad through the meadows, I encountered many a blustering and nipping wind, for nowhere has it freer play; and when the frost had smitten me on one cheek, heathen as I was, I turned to it the other also. Nor was it much better by the carriage road 30 from Brister's Hill. For I came to town still, like a friendly Indian, when the contents of the broad

open fields were all piled up between the walls of the Walden road, and half-an-hour sufficed to obliterate the tracks of the last traveller. And when I returned new drifts would have formed, through which I floundered, where the busy north-west wind had been depositing the powdery snow round a sharp angle in the road, and not a rabbit's track, nor even the fine print, the small type, of a meadow mouse was to be seen. Yet I rarely failed to find, even in mid-winter, 10 some warm and springy swamp where the grass and the skunk-cabbage still put forth with perennial verdure, and some hardier bird occasionally awaited the return of spring.

Sometimes, notwithstanding the snow, when I returned from my walk at evening I crossed the deep tracks of a woodchopper leading from my door, and found his pile of whittlings on the hearth, and my house filled with the odour of his pipe. Or on a Sunday afternoon, if I chanced to be at home, I heard the 20 crunching of the snow made by the step of a long-headed farmer, who, from far through the woods, sought my house, to have a social "crack"—one of the few of his vocation who are "men on their farms," who donned a frock instead of a professor's gown, and is as ready to extract the moral out of church or state as to haul a load of manure from his barn-yard. We talked of rude and simple times, when men sat about large fires in cold, bracing weather, with clear heads; and when other dessert failed, we tried our teeth on many 30 a nut which wise squirrels have long since abandoned, for those which have the thickest shells are commonly empty.

The one who came from farthest to my lodge, through deepest snows and most dismal tempests, was a poet. A farmer, a hunter, a soldier, a reporter, even a philosopher, may be daunted; but nothing can deter a poet, for he is actuated by pure love. Who can predict his comings and goings? His business calls him out at all hours, even when doctors sleep. We made that small house ring with boisterous mirth and resound with the murmur of much sober talk, making amends then to Walden vale for the long silences. Broadway 10 was still and deserted in comparison. At suitable intervals there were regular salutes of laughter, which might have been referred indifferently to the last uttered or the forthcoming jest. We made many a "bran new" theory of life over a dish of gruel, which combined the advantages of conviviality with the clear-headedness which philosophy requires.

I should not forget that during my last winter at the pond there was another welcome visitor, who at one time came through the village, through snow, and rain, 20 and darkness, till he saw my lamp through the trees, and shared with me some long winter evenings. One of the last of the philosophers,—Connecticut gave him to the world,—he peddled first her wares; afterwards, as he declares, his brains. These he peddles still, prompting God and disgracing man, bearing for fruit his brain only, like the nut its kernel. I think that he must be the man of the most faith of any alive. His words and attitude always suppose a better state of things than other men are acquainted with, and he 30 will be the last man to be disappointed as the ages revolve. He has no venture in the present. But

though comparatively disregarded now, when his day comes, laws unsuspected by most will take effect, and masters of families and rulers will come to him for advice.

“How blind that cannot see serenity !”

A true friend of man—almost the only friend of human progress. An Old Mortality—say, rather, an Immortality—with unwearied patience and faith making plain the image engraven in men’s bodies, the God of whom  
10 they are but defaced and leaning monuments. With his hospitable intellect he embraces children, beggars, insane, and scholars, and entertains the thought of all, adding to it commonly some breadth and elegance. I think that he should keep a caravansary on the world’s highway, where philosophers of all nations might put up, and on his sign should be printed, “Entertainment for man, but not for his beast. Enter ye that have leisure and a quiet mind, who earnestly seek the right road.” He is, perhaps, the sanest man, and has the  
20 fewest crotchets of any I chance to know—the same yesterday and to-morrow. Of yore we had sauntered and talked, and effectually put the world behind us ; for he was pledged to no institution in it, free-born, *ingenuus*. Whichever way we turned, it seemed that the heavens and the earth had met together, since he enhanced the beauty of the landscape. A blue-robed man, whose fittest roof is the overarching sky which reflects his serenity. I do not see how he can ever die  
—Nature cannot spare him.

30 Having each some shingles of thought well dried, we sat and whittled them, trying our knives, and admiring the clear yellowish grain of the pumpkin pine.

We waded so gently and reverently, or we pulled together so smoothly, that the fishes of thought were not scared from the stream, nor feared any angler on the bank, but came and went grandly, like the clouds which float through the western sky, and the mother-o'-pearl flocks which sometimes form and dissolve there. There we worked, revising mythology, rounding a fable here and there, and building castles in the air for which earth offered no worthy foundation. Great Looker! Great Expecter! to converse with whom<sup>10</sup> was a New England Night's Entertainment. Ah! such discourse we had, hermit and philosopher, and the old settler I have spoken of,—we three,—it expanded and racked my little house; I should not dare to say how many pounds' weight there was above the atmospheric pressure on every circular inch; it opened its seams so that they had to be caulked with much dulness thereafter to stop the consequent leak;—but I had enough of that kind of oakum already picked.<sup>20</sup>

There was one other with whom I had "solid seasons," long to be remembered, at his house in the village, and who looked in upon me from time to time; but I had no more for society there.

There too, as everywhere, I sometimes expected the Visitor who never comes. The Vishnu Purana says, "The householder is to remain at eventide in his courtyard as long as it takes to milk a cow, or longer if he pleases, to await the arrival of a guest." I often performed this duty of hospitality, waited long enough to<sup>30</sup> milk a whole herd of cows, but did not see the man approaching from the town.

When the ponds were firmly frozen, they afforded not only new and shorter routes to many points, but new views from their surfaces of the familiar landscape around them. When I crossed Flint's Pond, after it was covered with snow, though I had often paddled about and skated over it, it was so unexpectedly wide and so strange that I could think of nothing but Baffin's Bay. The Lincoln hills rose up around me at the extremity of a snowy plain, in which I did not remember  
10 to have stood before; and the fishermen, at an indeterminable distance over the ice, moving slowly about with their wolfish dogs, passed for sealers or Esquimaux, or in misty weather loomed like fabulous creatures, and I did not know whether they were giants or pigmies. I took this course when I went to lecture in Lincoln in the evening, travelling in no road and passing no house between my own hut and the lecture-room. In Goose Pond, which lay in my way, a colony of musk-rats dwelt, and raised their cabins high above  
20 the ice, though none could be seen abroad when I crossed it. Walden, being like the rest usually bare of snow, or with only shallow and interrupted drifts on it, was my yard where I could walk freely when the snow was nearly two feet deep on a level elsewhere and the villagers were confined to their streets. There, far from the village street, and, except at very long intervals, from the jingle of sleigh-bells, I slid and skated, as in a vast moose-yard well trodden, overhung by oak woods and solemn pines bent down with snow or bristling with  
30 icicles.

For sounds in winter nights, and often in winter days, I heard the forlorn but melodious notes of a

hooting owl indefinitely far ; such a sound as the frozen earth would yield if struck with a suitable plectrum, the very *lingua vernacula* of Walden Wood, and quite familiar to me at last, though I never saw the bird while it was making it. I seldom opened my door in a winter evening without hearing it ; *Hoo hoo hoo*, *hoorer hoo*, sounded sonorously, and the first three syllables accented somewhat like *how der do* ; or sometimes *hoo hoo* only. One night in the beginning of winter, before the pond froze over, about nine o'clock, 10 I was startled by the loud honking of a goose, and, stepping to the door, heard the sound of their wings like a tempest in the woods as they flew low over my house. They passed over the pond toward Fair-Haven, seemingly deterred from settling by my light, their commodore honking all the while with a regular beat. Suddenly an unmistakable cat-owl from very near me, with the most harsh and tremendous voice I ever heard from any inhabitant of the woods, responded at regular intervals to the goose, as if determined to expose and 20 disgrace this intruder from Hudson's Bay by exhibiting a greater compass and volume of voice in a native, and *boo-hoo* him out of Concord horizon. What do you mean by alarming the citadel at this time of night consecrated to me ? Do you think I am ever caught napping at such an hour, and that I have not got lungs and a larynx as well as yourself ? *Boo-hoo, boo-hoo, boo-hoo !* It was one of the most thrilling discords I ever heard. And yet, if you had a discriminating ear, there were in it the elements of a concord such as these 30 plains never saw nor heard.

I also heard the whooping of the ice in the pond, my

great bed-fellow in that part of Concord, as if it were restless in its bed and would fain turn over—were troubled with flatulency and bad dreams; or I was waked by the cracking of the ground by the frost, as if some one had driven a team against my door, and in the morning would find a crack in the earth a quarter of a mile long and a third of an inch wide.

Sometimes I heard the foxes as they ranged over the snow crust, in moonlight nights, in search of a part-  
10 ridge or other game, barking raggedly and demoniacally like forest dogs, as if labouring with some anxiety, or seeking expression, struggling for light and to be dogs outright and run freely in the streets; for if we take the ages into our account, may there not be a civilisation going on among brutes as well as men? They seemed to me to be rudimental, burrowing men, still standing on their defence, awaiting their transformation. Sometimes one came near to my window, attracted by my light, barked a vulpine curse at me, and then retreated.  
20 Usually the red squirrel (*Sciurus Hudsonius*) waked me in the dawn, coursing over the roof and up and down the sides of the house, as if sent out of the woods for this purpose. In the course of the winter I threw out half a bushel of ears of sweet-corn, which had not got ripe, on to the snow crust by my door, and was amused by watching the motions of the various animals which were baited by it. In the twilight and the night the rabbits came regularly and made a hearty meal. All day long the red squirrels came and went, and  
30 afforded me much entertainment by their manœuvres. One would approach at first warily through the shrub-oaks, running over the snow crust by fits and starts

like a leaf blown by the wind, now a few paces this way, with wonderful speed and waste of energy, making inconceivable haste with his "trotters," as if it were for a wager, and now as many paces that way, but never getting on more than half a rod at a time; and then suddenly pausing with a ludicrous expression and a gratuitous somerset, as if all the eyes in the universe were fixed on him,—for all the motions of a squirrel, even in the most solitary recesses of the forest, imply spectators as much as those of a dancing girl,—wasting 10 more time in delay and circumspection than would have sufficed to walk the whole distance,—I never saw one walk.—and then suddenly, before you could say Jack Robinson, he would be in the top of a young pitch-pine, winding up his clock and chiding all imaginary spectators, soliloquising and talking to all the universe at the same time,—for no reason that I could ever detect, or he himself was aware of, I suspect. At length he would reach the corn, and selecting a suitable ear, brisk about in the same uncertain trigonometrical way to the top- 20 most stick of my wood-pile, before my window, where he looked me in the face, and there sit for hours, supplying himself with a new ear from time to time, nibbling at first voraciously and throwing the half-naked cobs about; till at length he grew more dainty still and played with his food, tasting only the inside of the kernel, and the ear, which was held balanced over the stick by one paw, slipped from his careless grasp and fell to the ground, when he would look over at it with a ludicrous expression of uncertainty, as if suspecting 30 that it had life, with a mind not made up whether to get it again, or a new one, or be off; now thinking of

corn, then listening to hear what was in the wind. So the little impudent fellow would waste many an ear in the forenoon ; till at last, seizing some longer and plumper one, considerably bigger than himself, and skilfully balancing it, he would set out with it to the woods, like a tiger with a buffalo, by the same zig-zag course and frequent pauses, scratching along with it as if it were too heavy for him and falling all the while, making its fall a diagonal between a perpendicular and  
10 horizontal, being determined to put it through at any rate ;—a singularly frivolous and whimsical fellow ;—and so he would get off with it to where he lived, perhaps carry it to the top of a pine tree forty or fifty rods distant, and I would afterwards find the cobs strewn about the woods in various directions.

At length the jays arrive, whose discordant screams were heard long before, as they were warily making their approach an eighth of a mile off, and in a stealthy and sneaking manner they flit from tree to tree, nearer and  
20 nearer, and pick up the kernels which the squirrels have dropped. Then, sitting on a pitch-pine bough, they attempt to swallow in their haste a kernel which is too big for their throats and chokes them ; and after great labour they disgorge it, and spend an hour in the endeavour to crack it by repeated blows with their bills. They were manifestly thieves, and I had not much respect for them ; but the squirrels, though at first shy, went to work as if they were taking what was their own.

Meanwhile also came the chickadees in flocks, which,  
30 picking up the crumbs the squirrels had dropped, flew to the nearest twig, and, placing them under their claws, hammered away at them with their little bills, as if it

were an insect in the bark, till they were sufficiently reduced for their slender throats. A little flock of these tit-mice came daily to pick a dinner out of my wood-pile, or the crumbs at my door, with faint, flitting, lisping notes, like the tinkling of icicles in the grass, or else with sprightly *day, day, day*, or more rarely, in spring-like days, a wiry summery *phe-be* from the wood-side. They were so familiar that at length one alighted on an armful of wood which I was carrying in and pecked at the sticks without fear. I once had a sparrow alight 10 upon my shoulder for a moment while I was hoeing in a village garden, and I felt that I was more distinguished by that circumstance than I should have been by any epaulet I could have worn. The squirrels also grew at last to be quite familiar, and occasionally stepped upon my shoe, when that was the nearest way.

When the ground was not yet quite covered, and again near the end of winter, when the snow was melted on my south hill-side and about my wood-pile, the partridges came out of the woods morning and evening to 20 feed there. Whichever side you walk in the woods the partridge bursts away on whirring wings, jarring the snow from the dry leaves and twigs on high, which comes sifting down in the sunbeams like golden dust, for this brave bird is not to be scared by winter. It is frequently covered up by drifts, and, it is said, "sometimes plunges from on wing into the soft snow, where it remains concealed for a day or two." I used to start them in the open land also, where they had come out of the woods at sunset to "bud" the wild apple trees. 30 They will come regularly every evening to particular trees, where the cunning sportsman lies in wait for them,

and the distant orchards next the woods suffer thus not a little. I am glad that the partridge gets fed, at any rate. It is Nature's own bird, which lives on buds and diet-drink.

In dark winter mornings, or in short winter afternoons, I sometimes heard a pack of hounds threading all the woods with hounding cry and yelp, unable to resist the instinct of the chase, and the note of the hunting-horn at intervals, proving that man was in the rear. The  
10 woods ring again, and yet no fox bursts forth on to the open level of the pond, nor following pack pursuing their Actæon. And perhaps at evening I see the hunters returning with a single brush trailing from their sleigh for a trophy, seeking their inn.

Squirrels and wild mice disputed for my store of nuts. There were scores of pitch-pines around my house, from one to four inches in diameter, which had been gnawed by mice the previous winter,—a  
20 Norwegian winter for them, for the snow lay long and deep, and they were obliged to mix a large proportion of pine bark with their other diet. These trees were alive and apparently flourishing at midsummer, and many of them had grown a foot, though completely girdled; but after another winter such were without exception dead. It is remarkable that a single mouse should thus be allowed a whole pine tree for its dinner, gnawing round instead of up and down it; but perhaps it is necessary in order to thin these trees, which are wont to grow up densely.

30 The hares (*Lepus Americanus*) were very familiar. One hid her form under my house all winter, separated from me only by the flooring, and she startled me each

morning by her hasty departure when I began to stir, —thump, thump, thump, striking her head against the floor timbers in her hurry. They used to come round my door at dusk to nibble the potato parings which I had thrown out, and were so nearly the colour of the ground that they could hardly be distinguished when still. Sometimes in the twilight I alternately lost and recovered sight of one sitting motionless under my window. When I opened my door in the evening, off they would go with a squeak and a bounce. Near at 10 hand they only excited my pity. One evening one sat by my door two paces from me, at first trembling with fear, yet unwilling to move ; a poor wee thing, lean and bony, with ragged ears and sharp nose, scant tail and slender paws. It looked as if Nature no longer contained the breed of nobler bloods, but stood on her last toes. Its large eyes appeared young and unhealthy, almost dropsical. I took a step, and lo, away it scud with an elastic spring over the snow crust, straightening its body and its limbs into graceful length, 20 and soon put the forest between me and itself,—the wild free venison, asserting its vigour and the dignity of Nature. Not without reason was its slenderness. Such then was its nature. (*Lepus, levipes*, light-foot, some think.)

What is a country without rabbits and partridges ? They are among the most simple and indigenous animal products ; ancient and venerable families known to antiquity as to modern times ; of the very hue and substance of Nature, nearest allied to leaves and to the 30 ground,—and to one another ; it is either winged or it is legged. It is hardly as if you had seen a wild creature

when a rabbit or a partridge bursts away, only a natural one, as much to be expected as rustling leaves. The partridge and the rabbit are still sure to thrive, like true natives of the soil, whatever revolutions occur. If the forest is cut off, the sprouts and bushes which spring up afford them concealment, and they become more numerous than ever. That must be a poor country indeed that does not support a hare. Our woods teem with them both, and around every swamp  
10 may be seen the partridge or rabbit walk, beset with twiggy fences and horse-hair snares, which some cowboy tends.

## X. SPRING.

THE opening of large tracts by the ice-cutters commonly causes a pond to break up earlier; for the water, agitated by the wind, even in cold weather, wears away the surrounding ice. But such was not the case at Walden that year, for she had soon got a thick new garment to take the place of the old. This pond never breaks up so soon as the others in this neighbourhood, on account both of its greater depth and its having no stream passing through it to melt or wear away the ice. I never knew it to open in the course of a winter, not 10 excepting that of '52-3, which gave the ponds so severe a trial. It commonly opens about the 1st of April, a week or ten days later than Flints' Pond and Fair-Haven, beginning to melt on the north side and in the shallower parts where it began to freeze. It indicates better than any water hereabouts the absolute progress of the season, being least affected by transient changes of temperature. A severe cold of a few days' duration in March may very much retard the opening of the former ponds, while the temperature of Walden in- 20 creases almost uninterruptedly. A thermometer thrust into the middle of Walden on the 6th of March 1847, stood at 32°, or freezing point; near the shore at 33°; in the middle of Flints' Pond, the same day, at 32½°;

at a dozen rods from the shore, in shallow water, under ice a foot thick, at 36°. The difference of three and a half degrees between the temperature of the deep water and the shallow in the latter pond, and the fact that a great proportion of it is comparatively shallow, show why it should break so much sooner than Walden. The ice in the shallowest part was at this time several inches thinner than in the middle. In mid-winter the middle had been the warmest and the ice thinnest  
10 there. So, also, every one who has waded about the shores of a pond in summer must have perceived how much warmer the water is close to the shore, where only three or four inches deep, than a little distance out, and on the surface where it is deep, than near the bottom. In spring the sun not only exerts an influence through the increased temperature of the air and earth, but its heat passes through ice a foot or more thick, and is reflected from the bottom in shallow water, and so also warms the water and melts the under side of the  
20 ice, at the same time that it is melting it more directly above, making it uneven, and causing the air bubbles which it contains to extend themselves upward and downward until it is completely honeycombed, and at last disappears suddenly in a single spring rain. Ice has its grain as well as wood, and when a cake begins to rot or "comb," that is, assume the appearance of honeycomb, whatever may be its position, the air cells are at right angles with what was the water surface. Where there is a rock or a log rising near to the surface,  
30 the ice over it is much thinner, and is frequently quite dissolved by this reflected heat; and I have been told that in the experiment at Cambridge to freeze water

in a shallow wooden pond, though the cold air circulated underneath, and so had access to both sides, the reflection of the sun from the bottom more than counterbalanced this advantage. When a warm rain in the middle of the winter melts off the snow-ice from Walden, and leaves a hard dark or transparent ice on the middle, there will be a strip of rotten though thicker white ice, a rod or more wide, about the shores, created by this reflected heat. Also, as I have said, the bubbles themselves within the ice operate as burning-glasses to 10 melt the ice beneath.

The phenomena of the year take place every day in a pond on a small scale. Every morning, generally speaking, the shallow water is being warmed more rapidly than the deep, though it may not be made so warm after all, and every evening it is being cooled more rapidly until the morning. The day is an epitome of the year. The night is the winter, the morning and evening are the spring and fall, and the noon is the summer. The cracking and booming of the ice in- 20 dicate a change of temperature. One pleasant morning after a cold night, 24th February 1850, having gone to Flints' Pond to spend the day, I noticed with surprise, that when I struck the ice with the head of my axe, it resounded like a gong for many rods around, or as if I had struck on a tight drum-head. The pond began to boom about an hour after sunrise, when it felt the influence of the sun's rays slanted upon it from over the hills; it stretched itself and yawned like a waking man with a gradually increasing tumult, which was 30 kept up three or four hours. It took a short siesta at noon, and boomed once more toward night, as the sun

was withdrawing his influence. In the right stage of the weather a pond fires its evening gun with great regularity. But in the middle of the day, being full of cracks, and the air also less elastic, it had completely lost its resonance, and probably fishes and musk-rats could not then have been stunned by a blow on it. The fishermen say that the "thundering of the pond" scares the fishes and prevents their biting. The pond does not thunder every evening, and I cannot tell  
10 surely when to expect its thundering; but though I may perceive no difference in the weather, it does. Who would have expected so large and cold and thick-skinned a thing to be so sensitive? Yet it has its law to which it thunders obedience when it should as surely as the buds expand in the spring. The earth is all alive and covered with papillæ. The largest pond is as sensitive to atmospheric changes as the globule of mercury in its tube.

One attraction in coming to the woods to live was  
20 that I should have leisure and opportunity to see the spring come in. The ice in the pond at length begins to be honeycombed, and I can set my heel in it as I walk. Fogs and rains and warmer suns are gradually melting the snow; the days have grown sensibly longer, and I see how I shall get through the winter without adding to my wood-pile, for large fires are no longer necessary. I am on the alert for the first signs of spring, to hear the chance note of some arriving bird, or the striped squirrel's chirp, for his stores must be  
30 now nearly exhausted, or see the woodchuck venture out of his winter quarters. On the 13th of March,

after I had heard the bluebird, song-sparrow, and red-wing, the ice was still nearly a foot thick. As the weather grew warmer it was not sensibly worn away by the water, nor broken up and floated off as in rivers, but though it was completely melted for half a rod in width about the shore, the middle was merely honey-combed and saturated with water, so that you could put your foot through it when six inches thick; but by the next day evening, perhaps, after a warm rain followed by fog, it would have wholly disappeared, 10 all gone off with the fog, spirited away. One year I went across the middle only five days before it disappeared entirely. In 1845 Walden was first completely open on the 1st of April; in '46, the 25th of March; in '47, the 8th of April; in '51, the 28th of March; in '52, the 18th of April; in '53, the 23rd of March; in '54, about the 7th of April.

Every incident connected with the breaking up of the rivers and ponds and the settling of the weather is particularly interesting to us who live in a climate of so 20 great extremes. When the warmer days come, they who dwell near the river hear the ice crack at night with a startling whoop as loud as artillery, as if its icy fetters were rent from end to end, and within a few days see it rapidly going out. So the alligator comes out of the mud with quakings of the earth. One old man, who has been a close observer of Nature, and seems as thoroughly wise in regard to all her operations as if she had been put upon the stocks when he was a boy and he had helped to lay her keel,—who has come 30 to his growth, and can hardly acquire more of natural lore if he should live to the age of Methuselah,—told

me, and I was surprised to hear him express wonder at any of Nature's operations, for I thought that there were no secrets between them, that one spring day he took his gun and boat, and thought that he would have a little sport with the ducks. There was ice still on the meadows, but it was all gone out of the river, and he dropped down without obstruction from Sudbury, where he lived, to Fair-Haven Pond, which, he found, unexpectedly, covered for the most part with a firm  
10 field of ice. It was a warm day, and he was surprised to see so great a body of ice remaining. Not seeing any ducks, he hid his boat on the north or back side of an island in the pond, and then concealed himself in the bushes on the south side to await them. The ice was melted for three or four rods from the shore, and there was a smooth and warm sheet of water, with a muddy bottom, such as the ducks love, within, and he thought it likely that some would be along pretty soon. After he had lain still there about an hour he heard a  
20 low and seemingly very distant sound, but singularly grand and impressive, unlike anything he had ever heard, gradually swelling and increasing as if it would have a universal and memorable ending, a sullen rush and roar, which seemed to him all at once like the sound of a vast body of fowl coming in to settle there, and seizing his gun, he started up in haste and excited; but he found, to his surprise, that the whole body of the ice had started while he lay there, and drifted in to the shore, and the  
30 sound he had heard was made by its edge grating on the shore,—at first gently nibbled and crumbled off, but at length heaving up and scattering its wrecks

along the island to a considerable height before it came to a stand-still.

At length the sun's rays have attained the right angle, and warm winds blow up mist and rain, and melt the snow banks, and the sun dispersing the mist smiles on a checkered landscape of russet and white smoking with incense, through which the traveller picks his way from islet to islet, cheered by the music of a thousand tinkling rills and rivulets, whose veins are filled with the blood of winter which they are lo bearing off.

Ere long, not only on these banks, but on every hill and plain, and in every hollow, the frost comes out of the ground like a dormant quadruped from its burrow, and seeks the sea with music, or migrates to other climes in clouds. Thaw with his gentle persuasion is more powerful than Thor with his hammer. The one melts, the other but breaks in pieces.

When the ground was partially bare of snow, and a few warm days had dried its surface somewhat, it was 20 pleasant to compare the first tender signs of the infant year just peeping forth with the stately beauty of the withered vegetation which had withstood the winter,—life-everlasting, golden-rods, pinweeds, and graceful wild grasses more obvious and interesting frequently than in summer even, as if their beauty was not ripe till then; even cotton-grass, cat-tails, mulleins, johnswort, hard-hack, meadow-sweet, and other strong-stemmed plants, those unexhausted granaries which entertain the earliest birds,—decent weeds, at least, 30 which widowed Nature wears. I am particularly attracted by the arching and sheaf-like top of the

wool-grass ; it brings back the summer to our winter memories, and is among the forms which art loves to copy, and which, in the vegetable kingdom, have the same relation to types already in the mind of man that astronomy has. It is an antique style older than Greek or Egyptian. Many of the phenomena of Winter are suggestive of an inexpressible tenderness and fragile delicacy. We are accustomed to hear this king described as a rude and boisterous tyrant ; but  
10 with the gentleness of a lover he adorns the tresses of Summer.

At the approach of spring the red squirrels got under my house, two at a time, directly under my feet, as I sat reading or writing, and kept up the queerest chuckling and chirruping and vocal pirouetting and gurgling sounds that ever were heard ; and when I stamped, they only chirruped the louder, as if past all fear and respect in their mad pranks, defying humanity to stop them. No you don't—chickaree—chickaree.  
20 They were wholly deaf to my arguments, or failed to perceive their force, and fell into a strain of invective that was irresistible.

The first sparrow of spring ! The year beginning with younger hope than ever ! The faint silvery warblings heard over the partially bare and moist fields from the blue-bird, the song-sparrow, and the red-wing, as if the last flakes of winter tinkled as they fell ! What at such a time are histories, chronologies, traditions, and all written revelations ? The brooks  
30 sing carols and glees to the spring. The marsh-hawk sailing low over the meadow is already seeking the first slimy life that awakes. The sinking sound of

melting snow is heard in all dells, and the ice dissolves apace in the ponds. The grass flames up on the hillsides like a spring fire,—“*et primitus oritur herba imbris primoribus evocata*,”—as if the earth sent forth an inward heat to greet the returning sun ; not yellow but green is the colour of its flame ;—the symbol of perpetual youth, the grass-blade, like a long green ribbon, streams from the sod into the summer, checked indeed by the frost, but anon pushing on again, lifting its spear of last year’s hay with the fresh life below. It grows as 10 steadily as the rill oozes out of the ground. It is almost identical with that, for in the growing days of June, when the rills are dry, the grass blades are their channels, and from year to year the herds drink at this perennial green stream, and the mower draws from it betimes their winter supply. So our human life but dies down to its root, and still puts forth its green blade to eternity.

Walden is melting apace. There is a canal two rods wide along the northerly and westerly sides, and wider still at the east end. A great field of ice has cracked 20 off from the main body. I hear a song-sparrow singing from the bushes on the shore,—*olít, olít, olít,—chip, chip, chip, che char,—che wiss, wiss, wiss*. He too is helping to crack it. How handsome the great sweeping curves in the edge of the ice, answering somewhat to those of the shore, but more regular ! It is unusually hard, owing to the recent severe but transient cold, and all watered or waved like a palace floor. But the wind slides eastward over its opaque surface in vain, till it reaches the living surface beyond. It is glorious 30 to behold this ribbon of water sparkling in the sun, the bare face of the pond full of glee and youth, as if it

spoke the joy of the fishes within it, and of the sands on its shore,—a silvery sheen as from the scales of a *leuciscus*, as it were all one active fish. Such is the contrast between winter and spring. · Walden was dead and is alive again. But this spring it broke up again more steadily, as I have said.

The change from storm and winter to serene and mild weather, from dark and sluggish hours to bright and elastic ones, is a memorable crisis which all things  
10 proclaim. It is seemingly instantaneous at last. Suddenly an influx of light filled my house, though the evening was at hand, and the clouds of winter still overhung it, and the eaves were dripping with sleety rain. I looked out the window, and lo! where yesterday was cold grey ice there lay the transparent pond, already calm and full of hope as in a summer evening, reflecting a summer evening sky in its bosom, though none was visible overhead, as if it had intelligence with some remote horizon. I heard a robin in the  
20 distance, the first I had heard for many a thousand years, methought, whose note I shall not forget for many a thousand more,—the same sweet and powerful song as of yore. O the evening robin, at the end of a New England summer day! If I could ever find the twig he sits upon! I mean *he*; I mean *the twig*. This at least is not the *Turdus migratorius*. The pitch-pines and shrub-oaks about my house, which had so long drooped, suddenly resumed their several characters, looked brighter, greener, and more erect and alive, as if  
30 effectually cleansed and restored by the rain. I knew that it would not rain any more. You may tell by looking at any twig of the forest, ay, at your very

wood-pile, whether its winter is past or not. As it grew darker, I was startled by the *honking* of geese flying low over the woods, like weary travellers getting in late from southern lakes, and indulging at last in unrestrained complaint and mutual consolation. Standing at my door, I could hear the rush of their wings when, driving toward my house, they suddenly spied my light, and with hushed clamour wheeled and settled in the pond. So I came in, and shut the door, and passed my first spring night in the woods. 10

On the 29th of April, as I was fishing from the bank of the river near the Nine-Acre-Corner bridge, standing on the quaking grass and willow roots, where the muskrats lurk, I heard a singular rattling sound, somewhat like that of the sticks which boys play with their fingers, when, looking up, I observed a very slight and graceful hawk, like a night-hawk, alternately soaring like a ripple and tumbling a rod or two over and over, showing the underside of its wings, which gleamed like a satin ribbon in the sun, or like the pearly inside of a shell. This 20 sight reminded me of falconry and what nobleness and poetry are associated with that sport. The Merlin it seemed to me it might be called, but I care not for its name. It was the most ethereal flight I had ever witnessed. It did not simply flutter like a butterfly, nor soar like the larger hawks, but it sported with proud reliance in the fields of air; mounting again and again with its strange chuckle, it repeated its free and beautiful fall, turning over and over like a kite, and then recovering from its lofty tumbling, as if it had never set its foot 30 on *terra firma*. It appeared to have no companion in the universe—sporting there alone—and to need none

but the morning and the ether with which it played. It was not lonely, but made all the earth lonely beneath it. Where was the parent which hatched it, its kindred, and its father in the heavens? The tenant of the air, it seemed related to the earth by an egg hatched some time in the crevice of a crag; or was its native nest made in the angle of a cloud, woven of the rainbow's trimmings and the sunset sky, and lined with some soft midsummer haze caught up from earth? Its eyrie now  
10 some cliffy cloud.

Beside this I got a rare mess of golden and silver and bright cupreous fishes, which looked like a string of jewels. Ah! I have penetrated to those meadows on the morning of many a first spring day, jumping from hummock to hummock, from willow root to willow root, when the wild river valley and the woods were bathed in so pure and bright a light as would have waked the dead, if they had been slumbering in their graves, as some suppose. There needs no stronger proof of im-  
20 mortality. All things must live in such a light. O Death, where was thy sting? O Grave, where was thy victory, then?

Early in May, the oaks, hickories, maples, and other trees, just putting out amidst the pine woods around the pond, imparted a brightness like sunshine to the landscape, especially in cloudy days, as if the sun were breaking through mists and shining faintly on the hillsides here and there. On the 3rd or 4th of May I saw a loon in the pond, and during the first week of the  
30 month I heard the whip-poor-will, the brown-thrasher, the veery, the wood-pewee, the chewink, and other birds. I had heard the wood-thrush long before. The

phœbe had already come once more and looked in at my door and window, to see if my house was cavern-like enough for her, sustaining herself on humming-wings with clinched talons, as if she held by the air, while she surveyed the premises. The sulphur-like pollen of the pitch-pine soon covered the pond and the stones and rotten wood along the shore, so that you could have collected a barrellful. These are the "sulphur showers" we hear of. And so the seasons went rolling on into summer, as one rambles into higher and higher grass. 10

Thus was my first year's life in the woods completed; and the second year was similar to it. I finally left Walden September 6th, 1847.

## NOTES.

P. 3, l. 17. **Framed.** The wooden skeleton of the house—the posts, beams, joists and rafters—is called the frame.

P. 8, l. 11. **Mayflower**, the ship in which the Pilgrim Fathers sailed from Southampton to Plymouth (America), 1620.

32. **Marcus Porcius Cato**, a great Roman, who held high office in the state in the third century B.C. In the intervals of state employment he led a frugal, simple life on the Sabine farm he had inherited from his father.

P. 10, l. 3. “**We can make liquor,**” etc. These verses are to be found in a book called *New England's Annoyances*, which appeared about 1630. It is the oldest known composition by an American colonist.

P. 11, l. 32. **Exuviae**, the cast-off skin or shell of animals.

P. 13, l. 28. **Bartram**. William Bartram, 1793-1823. He wrote *Travels through North and South Carolina, Georgia, and East and West Florida*.

P. 16, l. 3. **Independence Day**, the anniversary of July 4th, 1776, when the delegates of the American States met in Congress, adopted the Declaration of Independence, which said, “We, the representatives of the United States of America, in Congress assembled, appealing to the Supreme Judge of the world for the rectitude of our intentions, solemnly publish and declare that these United Colonies are, and of right ought to be, Free and Independent States.”

P. 17, l. 6. **Harivansa**, a Sanscrit epic telling of the life and adventures of the Hindoo god Vishnu in his incarnation as Krishna. “**Harivansa**” means “the race of Hari or Vishnu.”

15. **Tanager**, a bird something like a finch, but with very brilliant plumage.

21. **Concord battle ground**. Concord is the chief town of Middlesex, Massachusetts, and is situated about twenty miles

north-west of Boston. In 1775 it became known to the commander of the English forces in America, General Gage, that ammunition and military stores had been secretly accumulated in this town. A force of eight hundred British soldiers was sent to destroy all military material, but it was met by about two hundred militia men, hastily assembled, and after a skirmish at Lexington, outside the town, was forced to retreat.

P. 20, l. 5. *Ulysses*. Ulysses during his wanderings had to pass the island of the Sirens, and in order that he might be prevented from yielding to their enticements he fastened himself to the mast until the ship had sailed too far for the Siren's song to be heard. (Homer's *Odyssey*, Bk. xii.)

P. 23, l. 25. *Life-everlasting*, a plant of the tansy group, known in England as cudweed.

26. *Blueberry*, whortleberry or bilberry.

*Ground-nut*, a plant belonging to the ivy family.

P. 25, l. 11. *Fitchburg*, railway junction to the south of Concord.

P. 26, l. 1. *Chairs*, chairmaking is one of the principal industries of Concord.

P. 28, l. 24. *Atropos*, the third of the three Fates, the one that cannot be avoided. From the Greek word meaning "not to be turned."

30. *Tell*. William Tell, a Swiss patriot who, in the fourteenth century, resisted the tyranny of Austria. For refusing to uncover before the ducal hat set up in the market-place by Gessler, the Austrian lieutenant-governor, he was ordered to shoot at an apple placed on the head of his son. This, owing to his great skill in the use of the cross-bow, he did without injuring the child.

P. 29, l. 8. *Buena Vista*, a small settlement in Mexico, on a tributary of the Rio Grande, where, in 1847, 4800 Americans defeated 20,000 Mexicans.

P. 30, l. 1. *Long Wharf*. Boston pier.

19. *Thomaston*, a small town in the State of Maine.

24. *Milwaukie*, a city of Wisconsin, situated on the western shore of Lake Michigan.

32. *Grand Banks*, a submarine plateau off the coast of Newfoundland, one of the great fishing grounds of the world.

P. 31, l. 12. *Dun-fish*, fish cured by being salted and then kept in the dark, covered over, for two or three months.

P. 32, l. 13. "To be the mast," etc. *Paradise Lost*, Bk. i. l. 292.

P. 35, l. 12. **Ben Jonsonian.** Ben Jonson (1573-1637) was one of the later Elizabethan dramatists. The reference here is probably to his *Masque of Owls*.

P. 37, l. 10. **Stygian,** belonging to the river Styx of classical mythology, which was said to flow seven times round the nether world.

21. **Drooling, drivelling.**

P. 39, l. 11. **Loon,** the Great Northern Diver, a bird about three feet long, with black and white plumage, head and neck of purplish green.

13. **Oriole,** the golden thrush, with black and bright yellow plumage.

P. 44, l. 19. **Goffe or Whalley.** Goffe was one of the judges at the trial of Charles I. He signed the death warrant, and in consequence was excluded from the benefits of the Act of Oblivion. With his father-in-law, General Whalley, he fled to America, where they lived in strict retirement for the rest of their lives.

P. 45, l. 14. **Old Parr.** Thomas Parr, who died in 1636, said to have been 102 years old.

17. **Acheron,** one of the rivers of the underworld.

28. **Hygeia,** goddess of health.

29. **Æsculapius,** the wonderful physician of Greek legend.

P. 46, l. 29. **Tremont, Astor, Middlesex House,** three large and well-known American hotels, in Boston, New York, and Concord respectively.

P. 48, l. 3. "**Arrived there,**" etc. Spenser's *Faerie Queene*, Bk. i., Canto i., referring to the arrival of Una and the Red Cross Knight at the house of the hermit.

P. 50, l. 9. **Antæus,** the son of Poseidon, god of the sea, and Ge, the earth. He compelled all strangers to wrestle with him, and as often as he was thrown he received fresh strength through touching his mother, Earth.

13. **Cinquefoil,** a flower belonging to the strawberry group.

21. **Woodchuck,** a small American rodent, fifteen to eighteen inches long.

P. 52, l. 13. **Wormwood,** a plant belonging to the tansy group.

22. **Agricola laboriosus,** hardworking farmer.

P. 53, l. 15 **Mr. Coleman's report.** It has been suggested that this refers to a report by the Rev. Hugh Colman (1785-1849), who published four papers on agriculture in Massachusetts.

29. Rans des Vaches, a Swiss song used to call the cattle home.

P. 54, l. 6. Paganini, an Italian violinist, famous for his performances on a single string.

P. 57, l. 19. Cranes, the cranes were fabled by ancient writers to have waged perpetual war with the pygmies, a race of dwarfs who lived on the shores of Ocean.

24. Hector. "Hector of the glancing helm," the great hero of the Trojans, son of King Priam. He was slain by the Greek Achilles.

P. 60, l. 5. Etesian winds, regular, periodical winds.

P. 61, l. 15. Orpheus, a celebrated bard of Greek mythology, who, by the music of his lyre, could enchant not only human beings, but beasts, trees and rocks.

P. 64, l. 7. "Did not pay a tax," Thoreau was opposed to slavery, and so became a "passive resister," refusing to pay the war tax levied by what he considered an unrighteous government; though, wishing to be a good citizen, he paid the highway and similar taxes. He was arrested as he came into Concord and put into jail for the night. In the morning he found to his great indignation that a friend had paid the tax, and he was set free.

P. 66, l. 4. "Fresh woods and pastures new." The closing words of Milton's *Lycidas*.

P. 67, l. 4. Cœnobites, monks living in communities.

P. 71, l. 17. Michael Angelo, a great Italian sculptor and painter, born 1474.

P. 72, l. 24. Potamogetons, pondweed.

P. 73, l. 24. Fluvialile, belonging to a river.

P. 74, l. 29. Shiner, white mullet.

P. 75, l. 23. Skaters, water-bugs, small fresh-water insects.

P. 79, l. 22. Phœbe, or pewee, a North American bird named from its monotonous cry.

24. Partridge (*Tetrao umbellus*), an American game bird belonging to the same family as the English grouse.

P. 80, l. 13. Dishabille, a form of the French word *déshabillé*, undress.

P. 82, l. 30. Myrmidons, a strong and warlike people who lived in Thrace under the rule of Achilles. Under his leadership they took part in the siege of Troy. Homer's *Iliad* tells of the slaying of Patroclus in battle by Hector and of the vengeance exacted by Achilles for the death of his friend.

P. 84 l. 17. **Austerlitz** (1805), **Dresden** (1813), battles in the Napoleonic wars.

18. **Concord fight**. This refers to the opening skirmish of the battle. The advancing British force were observed to be taking up the planks of the bridge over the river, and the militiamen hastened to save it. They were led by Captain Isaac Davis and Major John Buttrick. The British fired a volley, and two men, Isaac Davis and Abner Hosmer, fell dead, while two others, Luther Blanchard and Jonas Brown, were wounded. For an instant the Americans hesitated; then Buttrick cried out, "Fire, fellow-soldiers, for God's sake, fire!" His small force responded bravely, and after a short skirmish the British retreated.

24. **Threepenny tax**, the immediate cause of the outbreak of the War of American Independence was the levying by the British Parliament of a tax on all tea imported into America.

27. **Bunker Hill**. After the Concord battle ten thousand fresh British troops were landed at Boston. The colonists seized the heights of Bunker's Hill, which commands the town, and were only driven from their position by repeated charges of the British soldiers, who lost about 800 men in the struggle.

P. 85, l. 27. **Kirby and Spence** wrote *Introduction to Entomology or Elements of the Natural History of Insects*.

29. **Huber**, a Swiss naturalist, 1750-1831.

P. 86, l. 3. **Eugenius the Fourth**, Pope from 1431 to 1447.

7. **Olaus Magnus**, a Swedish naturalist.

11. **Christiern the Second**, King of Denmark and Norway, 1513-1523. In 1520 he extended his rule to Sweden, but the Swedes rebelled against his cruelty and tyranny and drove him from his throne in 1523.

13 **Polk**, President of the United States, 1845-1849.

14. **Webster's Fugitive-Slave Bill**, 1850. This Bill imposed penalties on any person assisting a runaway slave. It was supported by Daniel Webster, a noted orator and statesman, who thus lost the favour of the Abolitionists.

15. **Bose**, a somewhat contemptuous term for a dog.

P. 90, l. 22. **Bayous**, a French word used in Louisiana (which belonged to the French until 1803, when it was bought from them by the United States) meaning the outlet to a lake.

P. 93, l. 3. A poet, probably William Ellery Channing, nephew of the great American preacher, and an intimate friend of Thoreau's. He wrote *Thoreau, Poet and Naturalist*.

P. 95, l. 2. **Saturn**, in classical mythology, head of an old dynasty of gods, dethroned by his son Jupiter. After his dethronement he was fabled to have become king in Italy and introduced civilised customs. The period of his rule in Italy was known as the Golden Age.

P. 97, l. 10. **Unio fluviatilis**, river mussel.

P. 100, l. 26. **Vulcan**, god of fire.

27. **Terminus**, god of boundaries and frontiers.

P. 102, l. 26. **Light-winged Smoke**. This poem of Thoreau's was first published in *The Dial*, a magazine issued quarterly from July 1840 to April 1844 by the Transcendental Club, to which Emerson, Bronson Alcott, and other prominent American thinkers belonged.

**Icarian**. Icarus mounted on wings, which his father Dædalus had fastened on with wax, so near to the sun that the wax melted and he fell.

P. 109, l. 2. **Poet**, William Ellery Channing.

10. **Broadway**, a thoroughfare in New York.

22. **One of the last of the philosophers**, Bronson Alcott.

P. 110, l. 24. **Ingenuus**, free-born.

P. 111, l. 26. **Vishnu Purana**. The Puranas, of which there are eighteen, form an important division of Hindoo sacred literature. The Vishnu Purana tells the story of the god Vishnu, his nine incarnations, and the tenth incarnation which is to come, when he will appear as a White Horse and destroy all the wicked upon the earth.

P. 113, l. 3. **Lingua vernacula**, native tongue.

16. **Commodore**, leader.

P. 114, l. 20. **Scirius**, the genus squirrel.

P. 118, l. 12. **Actæon**, a famous huntsman of classic legend, who having by chance seen Artemis and her nymphs bathing, was changed by the goddess into a stag, and was torn to pieces by his own hounds.

P. 125, l. 1. **Bluebird**, a beautiful bird, its feathers sky-blue shading to purple and black. It is indigenous to America, where it is regarded much as the robin is with us.

**Redwing**, one of the thrush family.

P. 127, l. 24. **Pinweed**, one of the rock-rose tribe.

27. **Cotton-grass**, a species of sedge which gets its name from a cotton-like growth from the base of the fruit.

l. 30. **Cat-tails**, one of the reed-mace tribe, somewhat resembling a bulrush.

l. 30. **Mullein**, a plant belonging to the same tribe as the fox-glove and having a spike of large yellow flowers.

28. **Hard-hack**, a Canadian plant of the same tribe as the meadow-sweet, bearing bunches of rose-coloured flowers.

P. 129, l. 3. **Et primitus**, etc. A quotation from Varro, a great writer, "the most learned of all the Romans," born 116 B.C. "And first grass arises called forth by the first showers."

P. 130, l. 3. **Leuciscus**, dace.

26. **Turdus**, the thrush family.

P. 132, l. 31. **Veery**, a name given in America to Wilson's thrush.

**Cheewink**, the ground robin, called cheewink from its note.

## SUGGESTED QUESTIONS AND SUBJECTS FOR COMPOSITION.

### I.

1. Illustrate by diagrams: (a) each stick was carefully mortised or tenoned by its stump; (b) the boards were carefully feather-edged and lapped.

2. Compare this account with that given by Robinson Crusoe of the way he baked his bread, and illustrate by sketches showing each method.

3. What do you know about the *Mayflower*?

4. "There is a certain class of unbelievers . . . board-nails" (p. 10). What do you think Thoreau meant by this answer?

5. "I look upon England . . . handbox and bundle" (p. 12). Explain this statement, and say how far you think it is justified.

6. Put the passage, "When a town celebrates the busk . . . prepared themselves" (p. 13), into verse.

7. Write a short essay on: "The pursuits of the simpler nations are still the sports of the more artificial" (p. 15).

8. "Olympus is but the outside of the earth everywhere" (p. 16). What does this mean?

9. Give an account of the "Concord Battle."

10. "As the sun arose . . . nocturnal conventicle" (p. 17). Make a sketch illustrating this.

11. Draw a map of Thoreau's surroundings as they are described in the two paragraphs beginning "I was seated" (p. 17) and "This small lake" (p. 18).

12. "Like a coin in a basin" (p. 19). Explain this comparison.

## II.

1. Sketch the scene suggested by the passage, "When my floor was dirty . . . in their midst" (p. 22).
2. What are: life-everlasting, johnswort, golden-rod, shrub-oak, sand-cherry, blueberry, ground-nut?
3. Read through carefully the paragraph beginning "The whistle of the locomotive" (p. 25), and then rewrite in your own words.
4. Write a paragraph descriptive of an aeroplane on the model of that describing a locomotive, beginning "When I meet the engine" (p. 26).
5. Put the passage, "The stabler of the iron horse . . . protracted and unwearied" (p. 27), into verse.
6. Why should "Atropos" be a suitable name for an engine?
7. Explain "We are all educated thus to be sons of Tell" (p. 28).
8. "What recommends commerce to me is its enterprise and bravery" (p. 29). Give instances of enterprise and bravery shown by Englishmen in connection with commerce.
9. Write a description of an owl. Quote any references to owls, in prose or verse, that you remember to have read.
10. "The most aldermanic with his chin upon a heart-leaf." Sketch this frog.

## III.

1. Who do you think the "old settler" and the "elderly dame" really were?
2. Sketch Hygeia and Hebe.
3. Describe the "best room" in verse.
4. Explain the passage: "The waste and decay . . . stood its ground" (p. 47).
5. If you had visited Thoreau at his home in the woods, what questions would you have asked him?
6. "A man sits as many risks as he runs." Do you think this is true?

## IV.

1. Write out the story of Antæus.
2. Write a short poem on the beanfield.

3. Give in your own words the substance of the paragraph beginning "On gala days the town fires its great guns" (p. 55).
4. Write a short essay on "Weeds."
5. Sketch Thoreau working in his beanfield.

V.

1. Describe any village you know.
2. "These are the coarsest mills . . . within doors" (p. 60). Express the same idea by means of a different simile.
3. Rewrite the passage, "It was very pleasant . . . severe storms" (p. 61), translating the metaphor into a literal description.
4. Have you ever been lost? If so, describe your experiences.
- 5 "You who govern public affairs . . . when the wind passes over it, bends" (p. 65). Discuss these statements.

VI.

1. "A huckleberry never reaches Boston" (p. 66). Explain this.
2. Draw a sketch to illustrate the paragraph beginning: "In warm evenings I frequently sat in the boat" (p. 67).
3. Write a short essay on "Fishing."
4. What colours have you observed in the waters of rivers, lakes or the sea?
5. Draw a map of Walden lake.
6. Read carefully the passage, "One November afternoon . . . above the surface" (p. 75), and then rewrite it in your own words.

VII.

1. Write a short essay on Instinct in Animals.
2. Name and describe as many as you can of the wild creatures you have seen in the fields and woods of England.
3. Explain "Or perchance he was some Achilles . . . Patroclus" (p. 83).
4. Describe the combat of the ants.
5. What do you know about the "winged horse"?
6. Draw the loon flying over the lake.

## VIII.

1. Describe the stages by which some mass of foliage you have observed has changed to the colours of autumn and has finally fallen away to the bareness of winter.

2. How do you think Thoreau built his fireplace and chimney ? Illustrate with sketch.

3. Draw the house described on pp. 94, 95.

4. "I remembered the story . . . ruffled bosom" (p. 96). Put this story into eight lines of verse.

5. Write out the result of Thoreau's experiment of throwing stones on the ice.

6. "I sacrificed it to Vulcan, for it was past serving the god Terminus" (p. 100). What does this mean ?

7. Write a short essay on "Fire."

8. Express in your own words the comparison made by Thoreau between the way in which animals keep themselves warm and the method invented by man.

9. Give in your own words the substance of the verses : "Light-winged Smoke . . . clear flame" (p. 102).

## IX.

1. "That early settler's family" (p. 105). Tell this story in detail as you imagine it.

2. "One afternoon I amused myself . . . of his day" (p. 106). Sketch an illustration for this passage.

3. "An Old Mortality" (p. 110). Explain the reference.

4. Write out and explain the similes and metaphors contained in the paragraph beginning "Having each some shingles of thought" (p. 110).

5. Sketch the scene described in the passage : "The Lincoln Hills . . . or pigmies" (p. 112).

6. Tell how the red squirrel came for the corn.

7. Write a short essay on "Hunting."

8. Tell the story of Actæon.

9. Write eight lines of verse on the Hare.

10. Read carefully the paragraph beginning "What is a country without rabbits and partridges" (p. 119), and then rewrite it in your own words.

## X.

1. Describe in order any signs of the coming of spring that you have noticed in your immediate surroundings.
2. "One old man . . . standstill" (p. 125). Tell this story in your own words.
3. "We are accustomed to hear this king described . . . tresses of Summer" (p. 128). Explain this, and illustrate from what you have seen in English fields, lanes or gardens.
4. Write a short poem on "Spring."
5. Write a short essay on "Grass."
6. What picture have you formed in your mind of Thoreau now that you have read *Walden*?

## PASSAGES SUITABLE FOR LEARNING BY HEART.

- I. (a) "This was . . . the earth everywhere" (p. 16).  
 (b) "*The Lake Isle of Innisfree*," by W. B. Yeats.
- II. (a) "Sometimes on Sundays . . . wood-nymph" (p. 33).  
 (b) "Now I sit with all the windows and the door wide open, and am regaled with the scent of every flower in a garden as full of flowers as I have known how to make it. We keep no bees, but if I lived in a hive I should hardly hear more of their music. All the bees in the neighbourhood resort to a bed of mignonette, opposite to the window, and pay for the honey they get out of it by a hum, which, though rather monotonous, is as agreeable to my ears as the whistling of my linnets. All the sounds that Nature utters are delightful, at least in this country. I should not perhaps find the roaring of lions in Africa, or of bears in Russia, very pleasing; but I know no beast in England whose voice I do not account musical, save and except always the braying of an ass. The notes of all our birds and fowls please me without one exception. I should not, indeed, think of keeping a goose in a cage, that I might hang her in the parlour for the sake of her melody; but a goose upon a common or in a farmyard is no bad performer."  
Wm. Cowper.
- III. (a) "Yet I experienced . . . burden to me" (p. 42).  
 (b) Wordsworth's lines :  
"Nature never did betray  
 The heart that loved her; 'tis her privilege  
 Through all the years of this our life, to lead  
 From joy to joy; for she can so inform  
 The mind that is within us, so impress  
 With quietness and beauty, and so feed

With lofty thoughts, that neither evil tongues,  
 Rash judgments, nor the sneers of selfish men,  
 Nor greetings where no kindness is, nor all  
 The dreary intercourse of daily life  
 Shall e'er prevail against us, or disturb  
 Our cheerful faith that all which we behold  
 Is full of blessings." *Tintern Abbey.*

IV. (a) "This further experience . . . come up" (p. 58).

(b) "Thou visitest the earth, and waterest it: thou greatly enrichest it with the river of God, which is full of water: thou preparest them corn, when thou hast so provided for it. Thou waterest the ridges thereof abundantly: thou settlest the furrows thereof: thou makest it soft with showers: thou blessest the springing thereof. Thou crownest the year with thy goodness; and thy paths drop fatness. They drop upon the pastures of the wilderness: and the little hills rejoice on every side.

*Psalm lxy. 9-12.*

V. (a) "You who govern . . . bends" (p. 65).

(b) "The embers of the day are red  
 Beyond the murky hill.  
 The kitchen smokes; the bed  
 In the darkling house is spread:  
 The great sky darkens overhead  
 And the great woods are shrill.  
 So far have I been led,  
 Lord by thy will:  
 So far I have followed, Lord, and wondered still.

*R. L. Stevenson, Evensong.*

VI. (a) "In such a day . . . on its bosom still" (p. 74).

(b) "We paused beside the pools that lie  
 Under the forest-bough,  
 Each seemed as 'twere a little sky  
 Gulfed in a world below:  
 A firmament of purple light  
 Which in the dark earth lay  
 More boundless than the depth of night,  
 And purer than the day.—  
 In which the lovely forests grew  
 As in the upper air,  
 More perfect both in shape and hue  
 Than any spreading there."

*Shelley, To Jane.*

VII. (a) "There too, . . . by turns" (p. 82).

(b) "Farewell, farewell ! but this I tell  
To thee, thou Wedding Guest !  
He prayeth well who loveth well  
Both man and bird and beast.  
He prayeth best who loveth best  
All things both great and small,  
For the dear God who loveth us,  
He made and loveth all."

Coleridge, *Ancient Mariner*.

VIII. (a) "Light-winged Smoke . . . clear flame" (p. 102).

(b) "The power of Fire, or Flame, which we designate by some trivial chemical name, whereby hiding from ourselves the essential character of wonder that dwells in it as in all things, is with these old Northmen, Loke, a most swift, subtle Demon, of the brood of the Jotuns. The savages of the Ladrões Islands too (says some Spanish voyager) thought Fire, which they had never seen before was a devil or god, that bit you very sharply when you touched it, and that lived upon dry wood. From us too, no chemistry, if it had not stupidity to help it, would hide that Flame is a wonder. What is Flame?"

Thomas Carlyle.

IX. (a) "There too, . . . from the town" (p. 111).

(b) After it a voice roareth : he thundereth with the voice of his excellency ; and he will not stay them when his voice is heard. God thundereth marvellously with his voice ; great things doeth he, which we cannot comprehend. For he saith to the snow, Be thou on the earth ; likewise to the small rain, and to the great rain of his strength. He sealeth up the hand of every man ; that all men may know his work. Then the beasts go into dens, and remain in their places. Out of the south cometh the whirlwind : and cold out of the north. By the breath of God frost is given : and the breadth of the waters is straitened. Also by watering he wearieth the thick cloud : he scattereth his bright cloud : and it is turned round about by his counsels : that they may do whatsoever he commandeth them upon the face of the world in the earth."

Job xxxvii. 4-12.

X (a) "The first sparrow of Spring . . . fresh life below" (p. 128).

(b) "The heart of the ancient hills and his were one,  
The winds took counsel with him, and the sun

Spake comfort ; in his ears the shout of birds  
Was as the sound of clear, sweet-spirited words,  
The noise of streams as laughter from above,  
Of the old wild lands, and as a cry of love,  
Spring's trumpet blast, blown over moor and lea :  
The skies were red as love is, and the sea  
Was as the floor of heaven for love to tread.  
So went he as with light about his head  
And in the joyous travail of the year  
Grew April-hearted."

A. C. Swinburne, *Tristram of Lyonesse*.

## HELPS TO FURTHER STUDY.

1. "Early Spring in Massachusetts," "Summer," "Winter," "Autumn," all from Thoreau's *Journal*, are valuable as giving the author's own account of his pursuits and of the country in which he lived.

2. **Biography and Criticism.** *Life of Thoreau*, by H. S. Salt; *The Personality of Thoreau*, by F. B. Sanborn; *Thoreau, Poet and Naturalist*, by W. E. Channing; "Henry David Thoreau," an essay in *Men and Books*, by R. L. Stevenson.

3. **Transcendentalism.** Emerson's *Nature* and his *Essays* set forward the main general principles of the Transcendentalists; Hawthorne's *Blithedale Romance* is a story founded on the Brook Farm experiment; the chapter called "Brook Farm and Concord" in Henry James, *Hawthorne*, English Men of Letter Series, gives a short and clear account of New England thought at this period.

4. **History.** *Paul Revere's Ride*, by Longfellow, and Emerson's *Hymn* (1836) containing the lines

"Here once the embattled farmers stood,  
And fired the shot heard round the world"

tell of incidents in the Concord Battle. Hawthorne's *Mosses from an Old Manse* and *House of the Seven Gables* both give pictures of the life in New England at this period.

5. **Walden.** Defoe's *Robinson Crusoe* and R. L. Stevenson's *Silverado Squatters* offer points of comparison and contrast to *Walden*.
